## **Acknowledgments**

A. This thesis was completed under the careful guidance by Professor Sofia Teleport. Her profound professional knowledge, rigorous academic attitude, continuous improvement work style, noble teacher ethics, passion and beauty deeply affect me. From the topic selection to the thesis completion, Professor Sofia, my supervisor, provided careful guidance and devoted a lot of efforts. Here, I would like to express my highest respect and heartfelt gratitude to Professor Sofia.

Thanks to ISCTE-IUL for providing a platform for my master studies. Thanks to ISCTE-IUL Professors for your lectures, which provided knowledge and research methods and supported my research project. Thank you to all the teachers who have taught me this past year. Thanks to Professor Shi Wei's guidance team for their research, help and guidance. They laid the knowledge foundation for me to write this project.

## **Abstract**

This business plan details China MJ Consulting's plan to establish a Buddhist temple in Kenya, with the aim of creating a landmark of cultural and spiritual significance while also becoming an important tourist destination. Interviews and questionnaires are used in this study to ensure a comprehensive analysis of market demand and absorption. The interviews focused on local religious leaders, government officials, community members and Chinese business leaders in Kenya, with the aim of understanding their views on Buddhist temple construction, cultural possibilities and potential challenges.

Using tools such as PESTEL analysis, Porter's Five Forces Model and SWOT analysis, the program comprehensively assesses the market environment and demonstrates the political, economic, social and cultural conditions favorable to the project. In terms of site selection, architectural design and construction, the plan will ensure that the temple presents authentic cultural and religious elements to attract local and international visitors. Community engagement and sustainability are important components of the project. The project engages audiences by presenting modern technology and digital marketing tools through cultural and religious activities.

The forecasts show that the project is economically viable, generating a net present value of about \$2.6 million, an internal rate of return of 25% and a payback period of 6 years. A discount rate of 10% was used. These data show that projects can not only unlock initial investment in a relatively short period of time, but also bring significant economic and social benefits to local communities.

Through this initiative, MJ Consulting will not only establish a popular Buddhist site, but also contribute positively to the cultural diversity and economic development of Kenya.

## **Resumo**

Este plano de negócios detalha o plano da China MJ Consulting para estabelecer um templo budista no Quênia, com o objetivo de criar um marco de significado cultural e espiritual, tornando-se também um importante destino turístico. Este estudo recorre a entrevistas e questionários para garantir uma análise exaustiva da procura e da absorção do mercado. As entrevistas centraram-se em líderes religiosos locais, funcionários governamentais, membros da comunidade e líderes empresariais chineses no Quênia, com o objetivo de compreender as suas opiniões sobre a construção de templos budistas, as possibilidades culturais e os potenciais desafios.

Utilizando ferramentas como a análise PESTEL, o modelo das cinco forças de Porter e a análise SWOT, o programa avalia exaustivamente o ambiente de mercado e demonstra as condições políticas, económicas, sociais e culturais favoráveis ao projeto. Em termos de seleção do local, conceção arquitetónica e construção, o plano assegurará que o templo apresente elementos culturais e religiosos autênticos para atrair visitantes locais e internacionais. O envolvimento da comunidade e a sustentabilidade são componentes importantes do projeto. O projeto envolve o público ao apresentar tecnologia moderna e ferramentas de marketing digital através de actividades culturais e religiosas.

As previsões mostram que o projeto é economicamente viável, gerando um valor atual líquido de cerca de \$2,6 milhões, uma taxa interna de rentabilidade de 25% e um período de recuperação do investimento de 6 anos. Foi utilizada uma taxa de desconto de 10%. Estes dados mostram que este projeto pode trazer também benefícios económicos e sociais para as comunidades locais. Através desta iniciativa, a MJ Consulting não irá apenas criar um popular local Budista, mas também contribuir para a diversidade cultural e desenvolvimento económico do Quênia.

## 1. Introduction

The purpose of this study is to develop a detailed business plan for MJ Consulting to establish a Buddhist religious site in Kenya. Through market demand analysis, competitive environment assessment, and comparison of successful cases of Shaolin Temple and Fo Guang Shan, the study identifies potential market opportunities for Buddhist sites in Kenya. Kenya is a religiously diverse country, with 83% of the population practising a religion, while the spread of Buddhism and infrastructure are relatively weak. PESTE analysis and Porter's Five Forces and SWOT analysis put forward differentiated market entry strategies. Based on detailed financial projections, the study shows that the project is feasible. The study uses multiple sources of data, including local demographics, market growth data, and the operating models of Buddhist institutions. The project will contribute to local economic and cultural development by providing a modern religious experience, meeting spiritual needs, promoting cultural exchange and enhancing tourism.

With the rapid economic development and urbanization in Africa, religion has played an important role in social life. As an important country in East Africa, Kenya's religious needs are growing year by year, especially the dominance of Christianity, Islam and traditional religions. However, although Buddhism has spread to a certain extent in Kenya, it has not been widely developed, and the market potential is huge. The study aims to help MJ Consulting capture this market opportunity through the construction of modern places of worship to provide high quality religious and cultural experiences to the local community and international visitors.

This study first conducted market research and data analysis on the population distribution, religious belief structure and economic conditions in Kenya, including official reports of Statistics Kenya and industry research reports. Then, based on SWOT analysis (strengths, weaknesses, opportunities and threats), the research assesses the market environment and competitive situation of the project. Then, by comparing the global construction experience of Shaolin Temple and Foguang Mountain in Taiwan, especially the operation model in Africa, the management and business model of Buddhist places suitable for the Kenyan market is proposed. The research uses questionnaire survey and in-depth interview to elaborate the implementation path of the project. In the marketing of Buddhist places, the 4P strategy is used to clarify the positioning and promotion channels of Buddhist products, including: product, price, location, promotion, and detailed explanation of the Buddhist combination of marketing strategies and methods.

Population and Market Growth data: Research from Okumu (2024) and related industry studies. Religious belief distribution: According to Lyndsay & Rahu (2002) and data from local religious management organizations. Industry trends and market opportunities: Based on

research by Gedzi (2021) and UNESCO data on Cultural heritage and tourism. Case studies of Shaolin Temple and Foguang Mountain: derived from academic papers, annual reports of religious institutions, and related books, including Baumann (2001).

Chapter 1: Introduction, which lays the foundation for the whole paper, Outlines the research background, research significance, research questions and the overall framework of the paper. Chapter 2: Literature review, review of the existing relevant research, to lay a theoretical foundation for this study.

Chapter 3: Research methods. This chapter will introduce the research methods and analysis framework used in this research in detail to ensure the scientific and systematic research.

Chapter 4: Data Analysis and Results will present the results of the research analysis, including the key content of market demand, competitive environment and financial forecast.

## **2. Literature Review**

### **2.1. Business plan**

According to Kotte and Heskett (1992), it is proposed that a strong culture is closely related to an organization's long-term success. Cultures that are adaptable and have positive values can drive a company to maintain competitiveness in a changing market environment. Referencing Denison and Mishra (1995), it is concluded that cultural traits such as involvement, adaptability, consistency, and a sense of mission have a significant impact on organizational performance. The role of religion and culture in management should not be overlooked, especially in the context of Chinese Confucian culture, where religious beliefs such as Confucianism have a profound impact on corporate management practices and performance. They not only demonstrate a higher sense of social responsibility and long-term interest but also help to enhance the overall performance of the enterprise. Referencing Osterwalder and Pigneur (2010) in their book "Business Model Generation," they introduced the Business Model Canvas, a tool for describing, analyzing, and designing business models. The theoretical foundation of business models originates from multiple disciplines, including strategic management, organizational theory, and innovation management

According to Zhang Qingfeng (2018), a business plan is a crucial commercial document when launching a project, and the quality of the business plan directly affects investors' decisions on whether to invest in the project. Bertrand Theory (2019) proposed that a good business plan should achieve two purposes. The first is to motivate the internal team and management, strengthen confidence in the project's success, and clarify the project's strategic direction and decision-making criteria. The second is to attract investors externally by showcasing the new project's product information, unique advantages, future development prospects, and the value of the project to raise funds to support the project's implementation.

According to Zhang (2019), the content of a business plan includes both qualitative and quantitative analysis. Qualitative analysis focuses on describing and elaborating on various aspects of the project, providing investors with a framework and background for a comprehensive understanding of the project. This includes project goals, market research, product or service descriptions, team management, and organizational structure. Quantitative analysis includes economic evaluation, sensitivity analysis, cost-benefit analysis, etc. While qualitative analysis is the emphasis of most business plans, the economic evaluation of the project is a critical basis for investors' investment decisions. Therefore, both qualitative and quantitative analyses are essential. Only by integrating qualitative information about the market environment and development plans with quantitative economic evaluations can projects be more accurately assessed. Thus, a business plan should fully consider and integrate both

qualitative and quantitative analyses to ensure the comprehensiveness and persuasiveness of the project, effectively attracting investment and support.

Teece (2020) concluded that the business model defines how a company provides value to customers, how it motivates customers to pay, and how these payments are converted into profits through a systematic approach. Kotter (2022) argued in a business research journal that religion has an impact on organizational culture and performance, especially in the context of traditional Confucian culture in China. The profound impact of religious beliefs and cultural values on management practices and performance, and the significant positive and negative effects of a strong organizational culture on performance.

## **2.2. Business model**

According to Finke and Stark (1992), religious institutions often obtain income through donations, service fees, and leasing spaces. This revenue is not only used to maintain the daily operations of religious sites but may also be invested in community development projects that contribute economically to the local area, such as education, healthcare, and infrastructure construction. These funds not only sustain the daily operations of religious sites but may also be allocated to broader community development initiatives. Vukonić (1996) concluded that religious tourism not only brings direct economic benefits to religious sites but also promotes the development of the local economy. The arrival of tourists drives growth and development in related industries such as hotels, catering, and transportation, thereby creating more job opportunities and sources of income.

According to Smith (2010), religious sites provide a platform for community members to participate in and interact through regular gatherings and religious ceremonies, thus enhancing community cohesion and contributing to the local social culture. Religious festivals and ceremonies not only strengthen the connections among community members but also promote social harmony and unity. Religious sites are not only centers for religious activities but also important venues for community culture and social events. These sites often play a key role in social unity, moral education, and cultural heritage. In Kenya, religious sites also have significant social and economic value. Establishing a multifunctional, cultural tourism, business cooperation, and effective digital services at religious sites.

According to Bao and Fu (2022), the business model is an important part of corporate strategy. There is a large amount of research indicating a direct causal relationship between business models and corporate performance. The value positioning, value creation, and value capture in the business model all have a significant impact on corporate performance. The theoretical support for business positioning is not only in the conventional business field but also extends to the field of religious culture. Religious dissemination also achieves commercial

value and cultural value through business positioning. Religious sites not only play a role at the socio-cultural level but also their economic contributions should not be overlooked. In the field of religious culture, business positioning can help religious dissemination achieve a win-win situation for commercial and cultural value. For example, some religious sites may choose commercial partners that align with their beliefs or develop products and services that are consistent with their doctrines, thereby achieving commercial success while also spreading their religious beliefs. With the advent of the digital age, digitalization and religion are closely linked with global trends. Religious institutions can also use digital tools for dissemination and operations. For instance, online religious courses, virtual pilgrimages, and digital donations are all products of the combination of religion and modern technology. This not only brings new sources of income to religious institutions but also makes religious beliefs more conveniently spread to all parts of the world. Religious institutions make significant contributions in economic and socio-cultural aspects. With the development of the times, religious institutions are also innovating and adapting to better serve global believers and communities.

## **2.3. Buddhist place management**

### **2.3.1. The necessity of religious places**

Religion is a socio-cultural system that involves beliefs, rituals, moral codes, and lifestyles. It explains the origin and meaning of the world through the worship of deities, saints, supernatural forces, or cosmic laws, providing spiritual guidance and moral frameworks for humanity. It also requires sufficient Buddhist spaces and fixed locations to practice.

According to He (2018) viewpoint, the Fa Yin Journal proposes a rethinking of the dissemination and evolution of "world religions." Historically, religion has preservation, innovation, internal transmission, and external dissemination. Specific religious activity venues are required, meaning that the venues for practicing any religion are basically clarified. Through the analysis and comparison of the legal interpretations of religious activity venues by the State Council's "Regulations on Religious Affairs" and the State Administration for Religious Affairs' "Procedures for the Approval and Registration of Religious Activity Venues," we can see that the two regulations at the national level only classify religious activity venues. China, as a country with multiple religions, has developed over a long history, forming a pattern where Buddhism, Taoism, Islam, Catholicism, and Christianity coexist. The "Regulations on Religious Affairs" clearly state that temples, monasteries, and churches refer to the legality of venues for Buddhism, Taoism, Islam, Catholicism, and Christianity.

According to the Pew Research Center's (2022) argument that religion's relationship with happiness, civic engagement, and health around the world, in the United States and other

countries, being part of a congregation is a key factor. New analysis of survey data from the United States and more than twenty other countries shows that people active in religious groups are often happier and more engaged in civic activities than adults without religious beliefs or inactive members of religious groups. Many previous studies in the United States have found a positive correlation between religion and health. Regular participation in religious groups apparently has a higher level of well-being, so religious groups need sufficient space and fixed locations to carry out religious activities.

### **2.3.2. The management of Buddhist sites such as Shaolin Temple in Songshan and Foguangshan in Taiwan on a global scale**

The state of Buddhist venue management varies under different operational systems. Liu (2015) proposed that the global Buddhist venue management of Shaolin Temple should be understood as a comprehensive cultural communication and operation project, which involves aspects far beyond mere martial arts teaching. This management strategy includes not only the promotion of martial arts but also encompasses the global communication and operation of Buddhist culture. Reconstruction and restoration, standardization of martial arts, cultural communication, international exchanges, talent cultivation, and the use of modern communication means such as the internet, social media, and television documentaries introduce Shaolin culture and martial arts to a global audience, expanding its influence. The aspects involved go far beyond mere martial arts teaching; this management strategy includes not only the promotion of martial arts but also covers the global communication and operation of Buddhist culture. Brand management, to maintain the consistency and high-quality standards of the Shaolin brand, Shaolin branches and schools around the world follow unified management norms and teaching models, ensuring the pure transmission of Shaolin culture. The global Buddhist venue management of Shaolin Temple is a complex and multi-dimensional process. It involves not only the teaching of martial arts skills but also includes the communication and international operation of Buddhist culture. Through a series of carefully planned strategies and processes, Shaolin Temple has successfully brought Chinese traditional martial arts and culture to the world, becoming a bridge connecting different cultures and ethnic groups, and promoting the exchange and integration of cultural diversity.

According official website of Fo Guang Shan in Taiwan (2020), it is stated that Fo Guang Shan has successfully implemented a global strategy for the dissemination of Buddhist thought and culture through various communication channels and innovative strategies. Founded by Master Hsing Yun in 1967 in Taiwan, Fo Guang Shan is a Buddhist organization dedicated to promoting the concept of Humanistic Buddhism. Through various innovative methods of communication, Fo Guang Shan has successfully spread Buddhist thought and culture globally.

The practice of Humanistic Buddhism and its global strategy have not only enhanced the influence of Buddhism in modern society but also provided a useful reference for the dissemination of other religious groups. There are similarities as well as differences in the management of global venues between Shaolin Temple and Fo Guang Shan under two different systems.

According to Liu (2015), the similarity between the two systems are as follows:

1. Buddhist Doctrinal Foundation: Both belong to Mahayana Buddhism, follow similar Buddhist teachings, and pursue the purpose of universal salvation.
2. Global Expansion: They have expanded their influence globally through cultural exchange and religious propagation.
3. Monastery Management: Both have established standardized monastery management systems to ensure the stable operation of overseas venues.
4. Cross-Cultural Adaptation: They have shown strong adaptability in the global dissemination process to meet the needs of different cultures.

According to Liu (2015), the differences between the two institutions are as follows:

1. Religious dissemination methods: Shaolin Temple primarily spreads traditional culture through martial arts and meditation, while Foguangshan disseminates culture and engages in public welfare activities through more modern and diversified means.
2. Venue management: Shaolin Temple's management is primarily traditional, whereas Foguangshan has adopted modern management models, focusing particularly on institutionalization and efficiency.
3. Community involvement: Foguangshan participates more extensively in charity and public welfare activities, while Shaolin Temple contributes to the community mainly through martial arts and meditation training.

Both Shaolin Temple and Foguangshan emphasize the global dissemination of Buddhist culture, localized management, and the integration of social welfare in their global venue management. However, due to differences in sectarian backgrounds and the focus of their practices, they have specific management differences. Shaolin Temple places more emphasis on the combination of martial arts and meditation, while Foguangshan emphasizes the education and charitable work of modern Humanistic Buddhism. These differences give each their unique approach to global Buddhist propagation.

Table 2. 1-Comparison of Shaolin Temple and Foguangshan models

| Analysis of the Establishment of Religious Sites in Buddhism |                                                                             |                                                                                      |

### 2.2.3. Kenyan religious sites management

The management of religious sites is very important. According to Kariuki's (2018) perspective, which approaches from the angle of financial management, strategies for improving financial transparency and accountability in religious institutions are proposed, emphasizing the central role of financial management in the administration of religious sites. Njoroge and Karanja (2019) concluded from their study of the Kisumu Church that religious institutions play a significant role in community development, particularly in providing social services and promoting community cohesion. Mirkovic (2019) argued that the internal components of religious organizations should be examined as part of an internal analysis in Kenya to assess their competitive advantages, capabilities, competencies, characteristics, resources, and assets. Identifying the weaknesses and strengths of religious organizations can assist leaders in the implementation phase, strategic planning, and decision-making.

The management of religious sites in Kenya involves multiple aspects, including operational management, financial management, community engagement, religious education, and laws and regulations. According to Ayalew and wangi's (2020) research revealed the management practices of churches in Nairobi, emphasizing the importance of effective operational management for the sustained development of religious institutions. The Nairobi churches demonstrated a high degree of adaptability and innovation in their management practices. Through effective planning, transparent financial management, and proactive community engagement, the churches are able to provide a wide range of religious and social services despite limited resources.

#### **2.3.4. Religious products**

Religious products act as a link between religion and the soul, possessing the function of cultural transmission. According to Geertz's (1973) perspective, religious symbols and rituals play a role in culture, emphasizing the role of religious products as a medium for cultural dissemination. Religious symbols and rituals are not only expressions of faith; they also carry profound cultural significance and historical traditions. Through these elements, believers can understand and experience the core values of their faith more deeply. It is believed that religious products are carriers of cultural meaning, through the use and consumption of which believers can establish a connection with their belief system. Hirschman (1983) proposed that the consumption of religious products not only meets the spiritual needs of believers but also enhances their social and cultural identity. This consumption behavior helps believers find a sense of belonging in the community, strengthening their social networks and community engagement. Iannaccone (1998) suggested that the supply and demand of religious products are similar to those of general commodity markets, influenced by factors such as the number of believers, the frequency of religious activities, and cultural backgrounds. This implies that the production and consumption of religious products are affected by a variety of factors.

According to Einstein (2008), it is argued that the commercialization of religious products is not only a result of market demand but also a means for religious organizations to self-promote and develop. It reveals how religious organizations use commercialization strategies to promote themselves and attract more followers. This commercialization not only responds to market demand but also serves as a means for religious organizations to expand their influence and maintain operations.

According to Shackley (2002), it is argued that religious products can be divided into tangible and intangible categories. Tangible religious products include Bibles, prayer beads, religious jewelry, offerings, etc.; intangible religious products include religious ceremonies, prayer services, religious tourism, etc. Religious tourism is an important religious product, which not only includes the religious activities themselves but also encompasses related cultural and historical experiences. Religious tourism holds a special status as an important religious product, as it involves not only the religious activities themselves but also includes historical and cultural experiences related to specific religious sites. This form of tourism promotes cultural exchange and enhances understanding and respect for different religious traditions. These theories collectively construct a multi-dimensional perspective for understanding the complex role of religious products in modern society. They not only satisfy the spiritual needs of believers but also promote the spread of culture, social cohesion, and economic activity.

Referencing Allied Market Research (2021), it is found that the global Buddhist supplies market size is expanding rapidly, with projections indicating significant revenue generation by 2031. The market is expected to experience a compound annual growth rate (CAGR) of 6.8% from 2021 to 2031. The main drivers of this growth are the increasing global demand for Buddhist beliefs and cultural products, as well as the flourishing of religious tourism.

### **2.3.5. Marketing Mix**

McCarthy (1964) proposed the 4P theory, which is a marketing system design centered around product, price, place, and promotion. This theory has had a profound impact on the development of modern marketing theory. Its core idea is to divide marketing activities into four basic elements, and through systematic analysis and effective management of these elements, to achieve the market goals of the enterprise.

**Product:** A product refers to the goods or services provided by a company to consumers, including the quality, features, brand, packaging, etc. In marketing, the product is the most basic element. Companies need to continuously develop new products and improve existing ones to meet consumer demands and expectations. Moreover, companies also need to pay attention to the product life cycle to adopt appropriate marketing strategies at different stages.

**Price :** Price refers to the amount of money consumers need to pay to purchase a product or service, including pricing strategies, discounts, credit policies, etc. Price is an important factor that affects consumer purchasing decisions. Companies need to develop appropriate pricing strategies based on factors such as costs, competition, and market demand. In addition, companies can also adjust prices to achieve goals such as market share and profits.

**Place :** Location refers to the channels and processes through which products move from the point of production to the consumer, including distribution channels, logistics, inventory management, etc. The choice of location directly affects the accessibility of the product and the convenience of purchase for consumers. Enterprises need to select appropriate sales channels and logistics methods based on product characteristics, market demand, and other factors. In addition, enterprises also need to pay attention to the management and maintenance of channels to ensure the smooth flow of products.

**Promotion :** Promotion refers to activities by which a company communicates product information to consumers and stimulates their desire to purchase, including advertising, public relations, sales promotion, direct marketing, etc. Promotional activities can help companies increase product awareness, establish brand image, and stimulate consumer purchases. Companies need to develop appropriate promotional strategies based on factors such as target markets and product characteristics.

In summary, McCarthy's 4P theory provides a systematic analytical framework for modern marketing theory, helping companies better understand and manage marketing activities. With changes in the market environment and the development of consumer needs, when applying the 4P theory, companies also need to integrate other marketing concepts and methods to achieve more effective competitive advantages.

### **3. Methodology**

This business plan uses four main research methods: literature review, in-depth interviews, questionnaires, and data analysis to analyze the opportunities and challenges of establishing a Buddhist temple in Kenya.

**Literature Review:** The theoretical basis is provided through a literature review of Buddhist sites around the world, especially the successful cases of Shaolin Temple and Foguang Mountain. These examples show how religious sites can promote cultural exchange and economic development. At the same time, the literature review also identifies research gaps in the spread of Buddhist culture in Africa, particularly in terms of cultural integration and acceptance.

**In-depth interviews:** Face-to-face in-depth interviews(On Appendix A) with local religious leaders, government officials, community members, and Chinese business leaders were conducted to explore cultural compatibility, social participation, and legal and financial issues of Buddhist temples. The interviews were conducted on April 26, 2024, with a total of three interviewees, each lasting approximately two hours.

**Questionnaires:** In order to better understand the market needs, questionnaires(On Appendix B) were sent to local community members, tourists and entrepreneurs in Kenya. A total of 120 questionnaires were collected, 110 of which were valid responses. The survey focused on interest in Buddhist activities such as meditation and mindfulness and willingness to participate in cultural activities. The data was collected from April to June 2024.

**Data analysis:** The economic viability of the project was evaluated using financial indicators such as net present value (NPV), internal rate of return (IRR) and payback period. In addition, PESTEL analysis, SWOT analysis and Porter's Five Forces model are also used to assess market conditions and project risks, providing decision-making basis for the long-term sustainable development of the project.

## **4. Business Plan**

### **4.1. Executive Summary**

The project to build a Buddhist temple in Kenya sits at the intersection of cultural exchange, religious diversity and economic development. As China's Belt and Road Initiative (BRI) has strengthened bilateral ties, the growing number of Chinese living and working in Kenya offers strategic opportunities to build temples to serve local and expatriate communities.

According to data from the Chinese Overseas Chinese Affairs Office and the Kenya Tourism Administration, there are currently more than 50,000 Chinese living in Kenya, which receives 2 million international tourists every year, including 80,000 Chinese tourists. In addition, there are more than 50,000 native Buddhists in Kenya. Therefore, the goal of the project is to build a Chinese Buddhist temple serving these groups in the next 3 to 10 years.

The external analysis of the project examines political, legal, economic, socio-cultural, technological and environmental factors in Kenya through the PESTE methodology, helping us to gain a comprehensive understanding of the country's market environment. In addition, the project also conducted a more in-depth analysis of the needs of the target market through questionnaires and in-depth interviews. The questionnaire collected feedback from local community members, tourists and entrepreneurs in Kenya to explore their needs and expectations for Buddhist places; In-depth interviews with local religious leaders, government officials, and business representatives focused on their acceptance of Buddhist temples, legal and financial considerations, and the potential for cross-cultural collaboration. In combination with these research methods, the project also conducted competitor analysis, Porter's Five Forces model and consumer preference analysis to take an in-depth look at the dynamics of Kenya's religious industry. Based on the characteristics and market needs of the religious industry, the project develops a clear business strategy, positioning, mission, vision, values, product portfolio and customer analysis. SWOT analysis was used to further evaluate the strengths and weaknesses of the project in the Kenyan religious market, and on this basis STP analysis was used to clarify the market segments and target positioning of the project.

Based on these analyses, concrete plans for the construction of Chinese Buddhist temples in Kenya were developed and key implementation recommendations were made to achieve these goals. The core strategies of the project include deep engagement with local communities, the use of digital marketing channels to increase international visibility, and the promotion of cross-cultural understanding and exchange through regular cultural and religious events.

The results of the economic and financial feasibility analysis show that the project is financially viable, through the analysis of financial indicators such as net present value (NPV),

internal rate of return (IRR) and payback period, it generates a NPV of about \$2.6 million, an IRR of 25%, and the payback period is 6 years. A discount rate of 10% was used, indicating that the project has high financial attractiveness. In addition, the payback period of the project is 7 years, which shows that the project can recover the initial investment in a relatively short time. These results confirm the economic viability of the project and ensure its potential for sustainable development.

#### **4.1.1.Promoter organization**

MJ Consulting is a market-focused consulting firm established in 2018, with offices around the globe, including branches in China, India, the United States, and other locations. As a top-tier team with both academic backgrounds and commercial experience, MJ Consulting provides professional consulting services to help clients succeed in the fiercely competitive business environment. Our team consists of a group of experienced and passionate consultants, who possess outstanding academic credentials and rich commercial practical experience, dedicated to providing high-quality solutions to clients. To better adapt to the global market, the company places a strong emphasis on team diversity, with consultants from various countries and backgrounds, enabling a better understanding and adaptation to multicultural and diverse market environments. MJ Consulting has decided to expand its business in Africa and offer commercial planning services for religious sites in Kenya, Africa. We believe that with our professional consulting capabilities and extensive experience, we will be able to provide excellent solutions and achieve significant success in the African market.

## **4.2. External Situational Analysis**

### **4.2.1. PESTE Analysis**

#### **4.2.1.1. Political and Legal Context**

As an important country in East Africa, Kenya enjoys a relatively stable political environment, providing a solid foundation for foreign investment and cultural exchanges. In particular, its relationship with China is close. Kenya's political stability offers favorable conditions for foreign enterprises and cultural projects. Kenya is a significant partner for China's "Belt and Road" initiative, creating favorable political conditions for Chinese companies to enter Kenya. This close bilateral relationship lays the groundwork for the spread of Chinese culture in Kenya, with the construction of Buddhist sites serving as a concrete manifestation of cultural exchange between the two countries, further consolidating their cooperation.

**Freedom of religious belief:** The Kenyan Constitution guarantees freedom of religious belief, and various religious activities are legally conducted within the legal framework. This includes Buddhism, which can be freely spread within the legal framework. This provides a legal basis for the establishment of Buddhist temples.

**Legal provisions:** There are no significant legal obstacles to establishing Buddhist temples, but compliance with Kenya's religious site registration and land use regulations is required. Specifically, Buddhist temples must register with Kenya's Department of Social Services or relevant government departments as religious organizations. This process includes providing the organization's charter, a statement of religious belief, and relevant supporting documents. Kenya's laws do not have special restrictions on foreign religions, and the government maintains a neutral stance on religion overall. This means that foreign religions, including Buddhism, can freely spread in Kenya as long as they comply with national laws and regulations. At the same time, Buddhist temples can apply for the same legal protection as other religious sites through legal means.

In summary, Kenya's political stability and legal framework support foreign cultural and religious activities. In particular, the relationship with China is deepening under the "Belt and Road" framework, providing a favorable political environment for the construction of Buddhist temples. The religious freedom guaranteed by the constitution, the relaxed policies towards foreign religions, and the sound legal procedures make the establishment of Buddhist temples legally feasible. However, in the implementation process, projects must ensure good relations with local governments and communities and comply with all laws and regulations to ensure smooth progress.

#### **4.2.1.2. Economic Context**

Kenya is an economic powerhouse in East Africa, Statistics Kenya estimates GDP growth of 5.5% in 2022, demonstrating the resilience and vitality of its economy. The main drivers include agriculture, tourism, manufacturing, and services, all of which contribute to economic growth. The Kenyan government actively encourages foreign investment and has implemented policies such as tax incentives, land concessions, and infrastructure support to attract foreign capital and improve the investment climate, providing comprehensive services for foreign investors. Religious tourism is a significant component of Kenya's tourism industry. The construction of new religious sites can attract more tourists, promote economic development, and stimulate growth in related service sectors. The construction of religious sites can create job opportunities, enhance infrastructure, and drive the development of the hotel, catering, transportation, and retail industries, while also increasing economic benefits.

Analysis of future investment prospects in Kenya from the World Bank's Country Economic Development Report and Trading Economics;

From the perspective of economic growth prospects, Kenya's economy achieved a growth rate of 5.5% in 2022, despite global economic uncertainties, demonstrating resilience. In the coming years, GDP growth is expected to remain between 4%-6%, with continuous growth in sectors such as agriculture, manufacturing, tourism, and services. In particular, religious tourism and cultural projects offer new opportunities for foreign investment.

From the perspective of the investment environment, the Kenyan government actively improves the investment climate through tax incentives, land policy preferences, and infrastructure support. The government provides policy safeguards for religious and cultural projects, with low foreign investment risks and good prospects for returns. The investment environment is expected to continue to improve in the future. From the perspective of the growth potential of religious tourism, religious tourism holds an important place in Kenya's tourism industry, and the attractiveness of religious sites to tourists is gradually increasing. For MJ Consulting Company, constructing religious sites can not only seize the opportunities presented by the growth of religious tourism but also promote employment and the development of related industries, further enhancing the socio-economic impact of the projects.

Figure 4. 2-The 2012-2023 GDP (unit:100 millions yuan)Kenya - Gross Domestic Product

Source: TRADING ECONOMICS (2023)

Foreign direct investment (FDI) in Kenya has been on the rise in recent years, mainly in the infrastructure, manufacturing, ICT and agriculture sectors. China is the largest source of investment, especially in infrastructure and construction. Through the Belt and Road Initiative, especially in infrastructure development; It has promoted economic cooperation between the two sides. Investment in the US, Europe and the UK has focused on sectors such as services and finance. The Kenyan government has actively attracted foreign investment through preferential policies such as tax breaks and industrial parks, while improving the business environment and regional cooperation. While FDI is generally positive, it faces challenges such as political uncertainty, corruption, inadequate infrastructure and global economic volatility. In the future, the green economy, ICT and manufacturing are expected to be the growth areas of FDI. Overall, Kenya, with its policy support and economic potential, is increasingly becoming a hot spot for foreign investment, but sustained growth requires addressing multiple challenges.

Figure 4. 3-The Kenya- Foreign Direct Investment

Source: TRADING ECONONICS (2023)

Based on data from Trading Economics, exploring factors such as purchasing power, inflation, unemployment rate, and wage levels from multiple angles, the following chart provides a detailed analysis of Kenya's economic indicators:

Figure 4. 4-The Kenya Economic Indicators(2022-2026)

Source: TRADING ECONONICS (2023)

The chart displays the economic indicators of Kenya from 2022 to 2026, including the actual and forecasted situations of inflation rate, unemployment rate, and wage growth. The

red line in the chart represents the inflation rate, the blue line represents the unemployment rate, and the green line stands for wage growth. From these data, it is clearly seen that: The inflation rate peaked in 2023 and is expected to gradually decrease in the coming years. The unemployment rate increased in 2023 but is expected to gradually decline after 2024. Wage growth increased in 2023 and is expected to remain relatively stable in the following years.

These trends indicate that although the Kenyan economy faces pressure in the short term, the long-term outlook remains positive.

#### **4.2.1.3. Socio-Cultural Context**

The current status of religious sites in Kenya, according to the Kenya National Bureau of Statistics data (2020), shows a rich variety of religious beliefs with the existence of numerous places of worship for different religions, including but not limited to Christian churches, Islamic mosques, Hindu temples, and Buddhist monasteries, among others. Nationwide, there are approximately 108,000 religious sites. Of these, Christian places of worship account for the largest proportion, at about 65%, which is roughly 70,200 sites; Islamic sites come in second with about 30%, or approximately 32,400 sites. Other religious sites, such as those for Hinduism and Buddhism, have a smaller share, at about 3% and 2% respectively.

Additionally, there are regional differences in the number of religious sites in Kenya. In the capital city of Nairobi, the number of Christian and Islamic sites is relatively balanced, with about 41,000 and 39,000 sites respectively. However, in other cities and rural areas, the number of Christian sites significantly outnumbers those of Islam. The statistics on the number of religious sites reflect Kenya's religious diversity and freedom of belief. This also indicates that Kenya's religious market has significant potential, with a broad market demand and a promising development prospect. As one of Africa's important religious centers, religious activities in Kenya are frequent and deeply rooted in the population.

Kotler (2000) suggests that Kenya's external environment should take into account the dynamics of Africa, including competitive position and structure in Africa, as well as macroeconomic, technological, social, political, global, and demographic contexts.

Table 4. 1-The Status of religious sites in Kenya

| Religious beliefs | Place        | Percentage |
|-------------------|--------------|------------|
| Christianity      | About 70,200 | About 65%  |
| Islam             | About 32,400 | About 30%  |
| Hinduism          | About 32,400 | About 3%   |
| Buddhism          | About 2160   | About 2%   |

Source:Kenya National Bureau of Statistics (2020)

Kenya is a country rich in religious diversity, with the main religions including Christianity, Islam and traditional African religions. According to the latest statistics, Christians make up about 85% of the population, with Protestantism and Catholicism being the main denominations. Islamists make up about 11% of the population, mainly in the coastal and northern regions. The rest of the population follows traditional African religions or other religions.

Religion plays an important role in Kenyan society, not only as an expression of individual beliefs, but also profoundly influences the cultural and social norms of the community. Current situation of religious sites in Kenya, data from the National Bureau of Statistics of Kenya (2020) The number of religious sites in Kenya shows its rich and diverse religious beliefs. There are a number of religious sites in Kenya, including but not limited to Christian churches, Islamic mosques, Hindu temples and Buddhist temples. There are about 108,000 places of worship in Kenya. Among them, the number of Christian sites occupies the largest proportion, about 65%, or about 70,200; Islamic sites came in second with about 30 percent, or about 32,400. Other religious sites, such as Hinduism and Buddhism, account for a smaller proportion, about 3% and 2% respectively. In addition, there are some regional differences in the number of religious places in Kenya. In the capital, Nairobi, the number of Christian and Islamic sites is relatively balanced at around 41,000 and 39,000 respectively. In other urban and rural areas, Christian sites outnumber Islamic sites. The statistics on the number of places of worship reflect Kenya's religious pluralism and freedom of belief. This also shows that Kenya's religious market has huge potential, broad market demand, and good prospects for development. Kenya, as one of the important religious centers in Africa, has frequent religious activities and is deeply rooted in people's hearts. Kotler (2000) Kenya's external environment needs to take into account factors such as African dynamics, competitive position and competitive structure in Africa, as well as macroeconomic, technological, social, political, global and demographic contexts.

Table 4. 2-The Religion in Kenya

| Religious beliefs | Place        | Percentage |
|-------------------|--------------|------------|
| Christianity      | About 70,200 | About 65%  |
| Islam             | About 32,400 | About 30%  |
| Hinduism          | About 32,400 | About 3%   |
| Buddhism          | About 2160   | About 2%   |

Source:Kenya National Bureau of Statistics (2020)

Buddhism has flourished in Kenya since 1999 and with over 1000 Buddhists in Kenya, Buddhism is also one of the fastest growing religions in Kenya, there are Buddhist monasteries in Nairobi that are the main centers of Buddhism in Kenya, and the Nairobi House conducts missionary and meditation programs to promote Buddhism in Kenya. The diversity of religions and the widespread existence of religious beliefs in Kenya in 2018, and religious places have an important position and great influence in Kenyan society. According to the 2019 Census of Statistics Kenya, about 83% of the population of Kenya belong to different religious groups, of which Christianity, Islam and traditional religions are the dominant important religions. With the development of Kenya's economy and the improvement of people's living standards, the demand for religious places has also shown that the market for religious places in Kenya has expanded at a growth rate of about 5% per year. Freedom of religion is generally guaranteed in Kenya, which is a multicultural and multi-religious country in East Africa. Together, these religions make up Kenya's unique religious landscape. The harmonious coexistence of religions under the pluralism of beliefs demonstrates a social model of tolerance and respect. Has contributed to the development and prosperity of Kenya.

In Kenya, the church and its leaders play an important role in social and political affairs, and the church is not only the center of religious faith, but also a driving force for community service and social change. The Church's influence in society is not limited to religious matters, but extends to education, health and social services. The role of church leaders during the elections played a key role in maintaining peaceful activities, opposing violence and promoting national unity. Helped ease social tensions. Promoting justice includes fighting corruption, advocating for fair elections and supporting human rights. The National Council of Christian Churches of Kenya (NCCCK) often issues public statements during elections calling for integrity and fairness among citizens and governments. Church leaders also work to promote social justice. Freedom of religion and Constitutional protection: The Kenyan Constitution clearly stipulates freedom of religion and guarantees citizens the right to freely choose and practice their religion. Under the Societies Act on the Registration and Management of Religious

organizations, Kenyan law requires all religious organizations to register with the government and to submit an application to the Registrar of Societies for approval before they can legally carry out their activities. The Kenyan government keeps religion and politics separate, but religious groups are influential in social affairs. Therefore, maintaining good relations with the government and working with religious groups can reduce the resistance of the project. Under Kenya's Religious Affairs Regulations, religious organizations are required to apply for registration with the government and meet certain financial transparency and governance standards. Handle the necessary permits and approval documents.

Kenya is a religiously diverse country and the constitution guarantees freedom of religion. Although Christianity and Islam are the dominant religions, there is also room for other religions such as Buddhism. Understanding and respecting local religious practices and avoiding conflicts are prerequisites for the successful operation of religious sites. In recent years, several religious organizations have successfully established places of worship in Kenya. Nairobi's many large churches and mosques are not only the center of religious activities, but also important places for community service and social activities. These successful cases show the open attitude and supportive policies of the Kenyan government in the construction of religious sites.

Table 4.3-The Religious background data in Kenya

| 2009 and 2019 Census Data |         |        |
|---------------------------|---------|--------|
| Religion in kenya(Census) |         |        |
| Religion                  | 2009    | 2019   |

Source: Kenya Religious Sites Market Research Report (2019)

A small number of Chinese settled in Kenya as early as the 15th century, but modern Chinese immigration has mainly emerged in the late 1990s and early 2000s. The religious environment in Kenya is dominated by Christianity and Islam, with a certain proportion of traditional religions. Although Buddhism is not widespread in Kenya, interest in Chinese culture has gradually increased in Kenya as the Belt and Road Initiative advances and Chinese culture gains global influence. Kenyan society was tolerant of foreign cultures and provided the basis

for the establishment of Buddhist temples. The main target groups include the Chinese in Kenya, international tourists (especially Chinese tourists), and locals interested in Buddhist culture.

Table 4.4-The Target customer group in Kenya

| Target audience categories | Number of people/Proportion           | Specific Subdivision and Characteristics                                                                        | Potential audience size                               |
|----------------------------|---------------------------------------|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| 1. Chinese people in Kenya | > 30,000                              | Focused on major cities such as Nairobi, Mombasa, etc.                                                          | About 2,000-3,000 people                              |
|                            |                                       | Main professions: workers, merchants, entrepreneurs, technicians, etc.                                          |                                                       |
|                            |                                       | Have a certain sense of identity and interest in Buddhist culture.                                              |                                                       |
| 2. Tourists to Kenya       | 2 million international tourists/year | International tourists (mostly from Western countries)                                                          | Chinese tourists: 8,000-12,000 people                 |
|                            | 80,000 Chinese tourists/year          | Chinese tourists have increased significantly in recent years, with high demand during the peak tourism season. | International tourists (others): 10,000-20,000 people |
|                            |                                       | Interested in cultural experiences                                                                              |                                                       |
| 3. Local people in Kenya   | > Total population: 50,000,000        | Mostly Christians and Muslims                                                                                   | About 100,000                                         |
|                            |                                       | Cultural inclusiveness is higher in big cities.                                                                 |                                                       |
|                            |                                       | The interest in Buddhist culture is gradually increasing.                                                       |                                                       |

Source: Chinese overseas Chinese affairs agency & Kenya Tourism Board (2022)

According to the data analysis of the target group in the above table, the total potential audience size is about 120,000-150,000 people, and the regular participants (Chinese community and tourists) are about 10,000-20,000 people/year. The segmentation of the target group and the potential audience size provide basic data support for the market analysis of the establishment of Buddhist temples.

#### 4.2.1.4. Technological Context

When it comes to building religious sites in Kenya, the impact of the technical background on the business plan is mainly reflected in the infrastructure.

The construction technology and construction management combine traditional Chinese Buddhist architectural style to adapt to the local climate and resource conditions. Designed for the climate of different parts of Kenya, insulation, ventilation and moisture protection technologies are used. The use of green building technologies, such as solar energy and rainwater harvesting systems, is in line with the concept of environmental protection. Resource access and infrastructure, material selection needs to be balanced between import and local sourcing, and may require the import of special materials from China. Training of local labor force, combined with Chinese professional construction team to ensure high standards of construction quality.

Religious place management system, the introduction of intelligent management system to help efficient operation, covering donations, activity management, volunteer scheduling, etc. Install security systems such as CCTV monitoring and smart access control to ensure the safety of facilities and personnel. Cultural Communication and Interactive technology, using multimedia interactive technology and virtual reality (VR) to showcase Buddhist culture, attract visitors and promote cultural communication. Develop online platforms and apps to promote Buddhist learning and meditation instruction, and expand the temple's influence.

Technical cooperation and talent training, cooperation with Chinese enterprises, local technology companies and the government to obtain construction and management technical support. Cultivate local management and service talents to ensure long-term and efficient operation of the temple. Logistics and communication technology to overcome logistics challenges in remote areas and ensure efficient transportation of materials and equipment. Use advanced communication technologies to maintain contact with Buddhist believers around the world and promote cultural exchange and the spread of Buddhism.

Summary: The technical background for the establishment of Buddhist temples in Kenya involves construction techniques, access to resources and infrastructure, modern management and cultural dissemination techniques, and the implementation of security and operational systems. By combining traditional Buddhist building techniques from China with local resources and modern technology from Kenya, the temple can achieve efficiency and innovation in building quality, cultural dissemination and management. At the same time, combining the religious spirit of Buddhism with the concept of sustainable development can ensure the long-term stable operation of the temple in Kenya.

#### **4.2.1.5. Environmental Context**

Kenya's climate is diverse and is divided into four main climate zones: tropical rainforest climate, savanna climate, arid and semi-arid climate and mountain climate. Most religious sites will be located in more temperate climates, such as Nairobi and other highland areas, where

temperatures are more moderate, with average annual temperatures ranging from 15° C to 25° C.

Kenya is located in the East African Rift Valley, frequent geological activity, earthquake and volcanic activity is more common. When choosing a site for the construction of a religious site, a detailed geological survey is required, and the selection of seismic design and structural materials is also very important to ensure the safety and stability of the site. Kenya has rich natural resources, a large number of sunlight, water and biological resources for the application of green building technology provides a good condition. For example, solar photovoltaic systems can make full use of the abundant local sunlight resources to provide sustainable energy solutions.

The Kenyan government attaches great importance to environmental protection and has enacted a series of environmental regulations and policies. All new construction projects must undergo an environmental impact assessment and be approved by the Environmental Management Authority (NEMA). Kenya actively promotes the United Nations Sustainable Development Goals (SDGs), especially in the areas of climate action, sustainable cities and communities. Religious and cultural diversity has an important impact on environmental protection. Many communities have traditionally protected natural resources and the environment. At the same time, it is a country rich in biodiversity, with many national parks and nature reserves. When building religious sites, it is necessary to respect and integrate these traditional customs, avoid siting in these ecologically sensitive areas, reduce the destruction of wildlife habitats, and promote environmental protection and sustainable development.

#### **4.2.2. Sector Analysis**

The religious market in Kenya is remarkably diverse and active, with Christianity and Islam dominating, but the introduction of Buddhism and other forms of religion still presents potential market opportunities. In the analysis of the industry, we focus on the following key factors:

1. Market size and religious distribution: According to the Kenya National Bureau of Statistics, there are more than 108,000 religious places in Kenya, of which 65% are Christian and 30% are Islamic, while the proportion of other religious places such as Buddhism is relatively small (about 2%-3%). Although the popularity rate of Buddhism is relatively low, it still has potential market development space as one of the global religious forms, especially under the promotion of the "Belt and Road" initiative.

2. Growth potential of religious tourism: With the rapid development of Kenya's tourism industry, religious tourism has become an important part of attracting domestic and foreign tourists. Kenya's religious market is not limited to local religious believers, but also attracts a large number of international tourists. The increase in Chinese tourists provides more opportunities

for religious tourism, and the establishment of Buddhist temples can become a tourist destination with cultural and spiritual appeal.

3. Competitive landscape: While Christianity and Islam dominate, Buddhism can enter the market by offering unique spiritual and cultural experiences, especially as modern health practices such as mindfulness, meditation and retreat are gaining popularity. In addition, other religious sites and cultural centers are also promoting intercultural activities and religious dialogue, which provides more cooperation and development opportunities for the integration of Buddhist temples.

4. Industry barriers and regulatory requirements: The construction of religious sites in Kenya needs to comply with strict local laws and regulations, including religious site registration, land use permission and zoning laws. While the legal environment is generally friendly and supportive of religious freedom, Buddhism, as an emerging form of religion, needs to work closely with governments and communities to ensure compliance with legal requirements and social support.

5. Opportunities and challenges: The opportunity to establish Buddhist temples in Kenya lies not only in meeting the spiritual needs of local Buddhists and Chinese tourists, but also in attracting more tourists and local residents through religious tourism, cultural exchanges and health and wellness services. The challenge, however, is how to effectively form complementary relationships with existing mainstream religions and ensure a solid social foundation in a predominantly Christian and Islamic country.

In conclusion, the religious market in Kenya is diverse and dynamic, and the establishment of Buddhist temples, although facing competitive and regulatory challenges, still has a good market opportunity due to its unique cultural and religious positioning, as well as the needs of Chinese tourists and local Buddhists.

#### **4.2.3. Competitor Analysis**

The expansion of Buddhist sites in Kenya has been met with competition from other religious and cultural groups.

Direct religious competition: Christianity is the largest religion in Kenya, accounting for more than 85% of the population, and the different denominations have large networks, funding and community outreach programs, as well as running schools, hospitals and orphanages, and are deeply integrated into local society. Islam, which accounts for 11.2% of Kenya's

religious population, is more prominent in coastal areas such as Mombasa and Lamu, where mosques and Islamic centers are both religious sites as well as cultural centers and may compete with Buddhist temples in coastal areas. Traditional African religions play a role in the cultural and spiritual landscape of Kenya, especially in rural areas, often co-existing with Christianity and Islam and incorporating elements of different faiths.

Indirect competitors (Cultural centers and religious activities) : Cultural and religious centers, Kenya has several cultural centers that promote religious, cultural, and social activities, including Hindu temples, Sikh communities, and a number of Asian cultural associations. The cultural impact of Chinese economic activity in Kenya, but there are no large Buddhist institutions, is an opportunity.

Tourism and Wellness centers: With a thriving tourism industry in Kenya and the growing popularity of wellness centers, yoga retreats and other spiritual retreats, Buddhist meditation or mindfulness retreats may face competition, but can be distinguished by the uniqueness of Buddhism.

Table 4. 5-The Analysis of competitors of Buddhist sites

| Buddhism in Kenya Industry Competition Analysis: |                                                                                            |                                                                               |                                                                                                                                                       |
|--------------------------------------------------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Competitors                                      | Main features                                                                              | Competitive advantage                                                         | The impact on Buddhism                                                                                                                                |
| Christianity                                     | The main religion in Kenya, accounting for about 85% of the total population.              | Deep faith foundation                                                         | Buddhism faces pressure in terms of the number of believers and social penetration; there is a need to strengthen publicity and community engagement. |
|                                                  |                                                                                            | Rich in resources, it has received international and local financial support. |                                                                                                                                                       |
|                                                  |                                                                                            | Good community foundation                                                     |                                                                                                                                                       |
| Islam                                            | Concentrated in coastal areas, accounting for 11.2% of the population.                     | Strong community cohesion                                                     | Buddhism faces competition for funds and resources in the construction of religious infrastructure.                                                   |
|                                                  |                                                                                            | Obtain financial support from Middle Eastern countries.                       |                                                                                                                                                       |
|                                                  |                                                                                            | Religious education and charity projects are numerous.                        |                                                                                                                                                       |
| Hinduism                                         | From the Indian immigrant community, mainly existing in urban areas.                       | Economically resourceful, influential in the business sector.                 | Buddhism and Hinduism are competing in some Asian communities; there is a need to expand influence among different cultural groups.                   |
|                                                  |                                                                                            | The internal culture of the community is strong and well-preserved.           |                                                                                                                                                       |
| Traditional African religions                    | Popular in rural and ethnic communities in Kenya, emphasizing ancestor and nature worship. | Deeply rooted in local culture                                                | Buddhism may need to integrate local elements to be accepted in remote areas.                                                                         |
|                                                  |                                                                                            | Closely integrated with ethnic culture                                        |                                                                                                                                                       |
| New religious movements                          | Mainly attracts young people, focusing on meditation, mindfulness, and spiritual practice. | Flexibility and modernization                                                 | Buddhism can attract young audiences through mindfulness and meditation, but it faces competition from other spiritual practices organizations.       |
|                                                  |                                                                                            | Has a significant impact through online dissemination                         |                                                                                                                                                       |

#### 4.2.4. Porter's Five Forces Analysis

Porter's Five Forces analysis model can help us understand the competitive environment for establishing Buddhist sites (temple industry) in Kenya from five aspects. Here is the Porter's Five Forces analysis of the temple industry in Kenya:

##### 4.2.4.1 Threat from existing competitors

Kenya is dominated by Christianity and Islam, both of which occupy the main religious space and have significant resources, followers and community influence. These mainstream

religious organizations have established solid infrastructure, such as churches and mosques, making it difficult for other religions to enter the market.

Risk level: High - Because of the strong religious influence of Christianity and Islam, entering this already stable market will be more challenging.

Low market saturation: As Buddhism is still in the early stages of expansion in Kenya, Buddhist sites have not yet formed an extensive network in the country and there is less competition available. But with the growth of religious tourism and meditation, competition is likely to intensify in the future.

Risk level: Medium - The market is not saturated at present, but as demand increases, competition will increase in the future.

#### *4.2.4.2 Threat from new entrants*

Building Buddhist sites requires a lot of capital, especially in areas with relatively poor infrastructure. This creates high financial and resource barriers for new entrants. In addition, obtaining land and building permits can be a major obstacle.

Risk level: Medium - The need for capital and resources is high, but there are certain solutions (such as investment, external support, etc.), so the risk is medium.

Cultural acceptance: Buddhism is relatively new in Kenya and is not as well known and accepted by society as Christianity and Islam. Therefore, new entrants need to spend time and resources to educate the public and raise awareness of Buddhism.

Risk level: High - Low cultural acceptance is the main obstacle for Buddhism to enter the Kenyan market, requiring a lot of time and resource investment, so the risk is high.

Government support and policies: The Kenyan government supports multiculturalism, but the establishment of new religious sites still needs to comply with certain legal frameworks, including land use, legal registration of religious groups, and so on, which can be a challenge for new entrants.

Risk level: Low - Although regulatory requirements need to be met, the government supports multiculturalism, the legal framework does not pose a serious barrier, and the risk is low.

#### *4.2.4.3 Threat from substitute services*

Christian, Islamic and Hindu sites dominate Kenyan society, and Buddhist sites face pressure from these alternative religions. The habit of many Kenyans to seek spiritual solace in traditional religious sites has reduced the need for Buddhist sites.

Risk level: High - The deep roots of Christianity and Islam put Buddhism under a lot of pressure to replace it, so the risk is high. Non-religious alternatives: As Kenyan society grows more diverse, some people may seek non-religious spiritual activities such as meditation and

yoga, which are not dependent on specific religious sites and can replace some functions of Buddhist sites.

Risk level: The popularity of medium - non-religious activities (such as yoga, etc.) has created some substitution for Buddhist sites, but their differences in cultural and religious experience with Buddhism make the substitution risk relatively moderate.

#### *4.2.4.4 Bargaining power of buyers*

The main customers of Buddhist sites are believers and tourists seeking spiritual practice. As the number of Buddhist adherents in Kenya is limited, attracting new adherents and tourists will be key to the development of Buddhist sites. The high demand from tourists, especially international tourists, has provided the temple with opportunities to develop religious tourism, but the small number of believers still limits the bargaining power of the demand side.

Risk level: Medium - Small number of Buddhists, major group of international tourists, medium bargaining power.

Fungibility of places of worship: Compared with other mainstream places of worship, Buddhist places are not widely distributed in Kenya, so their appeal is less, buyers' choice is limited, and bargaining power is not strong.

Risk level: Low - Low risk due to the weak substitutability of Buddhist sites, fewer options for buyers, and weak bargaining power.

#### *4.2.4.5 Bargaining power of suppliers*

The construction of Buddhist sites depends on building materials and design services. In Kenya, the construction industry has a relatively rich supply of suppliers, especially in urban areas such as Nairobi, so the bargaining power of suppliers is relatively low.

Risk level: Low - The construction industry suppliers have rich resources, weak bargaining power, and low risks.

Funding and talent providers: Funding for Buddhist activities mainly comes from donations, which makes the source of funding unstable and increases the difficulty of project advancement. In addition, the construction and operation of Buddhist sites require professional monks and managers, and professionals familiar with Buddhist culture are relatively scarce in Kenya, which increases the bargaining power of talent suppliers.

Risk level: High - Due to unstable funding sources and scarce talent, suppliers have high bargaining power, so the risk is greater.

There is potential for establishing Buddhist sites in Kenya, especially driven by tourism and spiritual and cultural activities. However, the main challenges come from competition from existing religious organizations, access to funding, and increased cultural acceptance. By strengthening cooperation with local communities, promoting the spread of Buddhist culture, and leveraging the growth of tourism, Buddhist venues can find room to grow in Kenya.

#### **4.2.5. Consumer Analysis**

The analysis of potential customers of Buddhist places in Kenya is carried out from the following aspects, and the data sources are mainly based on questionnaires and in-depth interviews. We gathered feedback from local community members, tourists, business people and relevant religious groups in Kenya, with questionnaires and interviews covering their interests, preferences and potential engagement. The transcription of the interviews is on Appendix A and the results of the survey are available on Appendix C.

##### ***4.2.5.1 Characteristics of Consumers***

According to the survey results, the potential customers of Buddhist sites in Kenya mainly include young and middle-aged people, especially those seeking spiritual solace and self-improvement. Many Buddhist sites attract young people interested in meditation and mindfulness, especially young professionals in urban areas. In terms of gender, the results from the survey showed that women were generally more interested in meditation and spiritual activities than men.

At the same time, survey data show that many potential customers are highly educated and have a high acceptance of cultural diversity and spiritual practice. This group is generally more inclined to explore new ideas and beliefs and is willing to engage in activities such as meditation and mindfulness. Of the respondents, about 70% expressed interest in trying Buddhist activities, especially in the context of meditation and spiritual growth.

##### ***4.2.5.2 Consumer behavior***

It can be seen from the questionnaire that many potential customers tend to participate in Buddhist activities in the process of seeking inner peace and spiritual growth. Meditation and mindfulness practices are gaining popularity in the rapidly changing and stressful world of urban life. Especially in in-depth interviews, urban middle class professionals generally indicated that they view meditation activities as an effective way to reduce stress and relax.

In addition, about 60 percent of respondents said they want to strengthen social connections through participation in community activities and cultural exchanges. The survey results showed that meditation workshops and community activities offered by Buddhist venues were important factors in attracting customers. By sharing spiritual experiences with others, many consumers feel an increased sense of engagement and belonging, which also drives them to choose to participate in Buddhist related activities more frequently.

##### ***4.2.5.3 Consumer preference***

Feedback from questionnaires and interviews revealed that spirituality and mindfulness activities have broad appeal in Kenya, especially in the more urbanized areas. Potential customers generally tend to attend activities themed around meditation, yoga and mindfulness.

These activities not only align with global trends in physical and mental health, but also help promote harmony and balance in the body and mind of participants. About 75 percent of survey participants said they showed a strong interest in meditation activities incorporating Buddhist teachings, especially in coping with life stresses and mental health management.

The interview results further support this finding, especially among young professionals and the middle class, where Buddhist spiritual and meditation practices are seen as an effective way to de-stress and self-reflect. Interviewees mentioned that meditation and mindfulness classes not only attract individual practitioners, but also provide stress management and leadership opportunities for employees. In addition, the interview feedback also indicated that many customers showed great interest in Buddhist activities that could integrate local culture. For example, about 65% of respondents and multiple interviewees agreed that incorporating elements of traditional Kenyan culture (such as music, dance, festivals, etc.) into Buddhist rituals and celebrations significantly increased their sense of participation and identity. This cultural mix helps Buddhist activities appeal to a wider audience, not just traditional believers, but also tourists and local residents interested in Kenyan culture. Interviewees also mentioned that such events have the potential to be an important platform to promote cross-cultural exchange and enhance the overall attractiveness of Buddhist sites.

#### *4.2.5.4 Summary*

Potential customers of Buddhist sites in Kenya are primarily young, educated professionals seeking spiritual solace and community involvement. By offering meditation, mindfulness and activities that integrate with local culture, Buddhist venues can attract more customers. Questionnaires and in-depth interviews indicate that consumer interest in Buddhist sites is focused on spiritual growth and community engagement. Strengthening interaction with the community, providing diverse activities and raising awareness of Buddhist culture are key to future development.

### **4.3. Opportunities and Threats**

As the demand for places of worship grows in Kenya, especially as urbanization accelerates and places of worship become core facilities in communities, there is huge potential for the religious market.

Opportunities:

Tourism development: Religious tourism is on the rise, and Buddhist sites are expected to attract domestic and foreign tourists and boost economic growth. Interest in spiritual practices:

There is an increased interest in spiritual practices such as meditation and mindfulness, providing potential customers for Buddhist sites.

Policy support: The Kenyan government encourages cultural diversity and may provide financial and policy support for the construction of Buddhist sites.

Community involvement: Working with local communities can increase recognition of Buddhist sites and increase opportunities for participation.

Support from International Buddhist Organizations: Support from international Buddhist organizations can provide funds and resources to facilitate the establishment and operation of temples.

Threats:

Fierce religious competition: Christianity and Islam are dominant in Kenya, and Buddhism faces strong competitive pressure.

Low cultural acceptance: Buddhism is still relatively new in Kenya, and the lack of awareness in society may affect the growth of followers.

Inadequate infrastructure: Infrastructure development is lagging in some areas, which can affect temple construction and operations.

Risk of capital fluctuation: Buddhist places mainly rely on donations, and the source of funds is unstable, which may lead to operational difficulties. method

Legal and policy restrictions: religion-related regulations and land use issues can pose obstacles to new temple construction.

#### **4.4. Internal Situational Analysis**

##### **4.4.1. Mission, vision and values**

Mission - Through professional construction and operation services to build religious fields, combined with local cultural characteristics and modern facilities, meet the needs of Kenyan religious groups, and promote the harmonious development of religious activities and society.

Vision - To become a leader in the construction and management of religious places in Kenya, establish a good international reputation, promote the modernization and multi-function of religious places, provide excellent religious experience and services for believers, and promote the development of religious undertakings and social prosperity.

Values - Integrated into Kenya's multi-religious culture and local customs, the design and construction meet religious needs. Pursue innovative design and high-quality construction, and

provide advanced facilities to enhance the function and attractiveness of religious sites. Provide a full range of management services to ensure the efficient operation of religious sites and the satisfaction of believers. Maintain business integrity and establish good working relationships with governments, religious organizations and communities. Focus on social impact, promote harmony and community development, and undertake corporate social responsibility.

#### **4.4.2. Objectives**

The objectives of the project to establish a Buddhist site in Kenya are as follows.

##### **Provide religious sites with local cultural characteristics:**

Design and build religious sites that are unique and tailored to local needs, taking into account Kenya's religious and cultural background and local customs. According to religious beliefs and geographical characteristics, flexible design and construction schemes are used to ensure that Buddhist sites are in line with local cultural characteristics and meet the needs of believers and church organizations.

##### **Upgrade the hardware and equipment of Buddhist sites:**

Improve the lack of physical facilities and equipment in Kenya's religious places to enhance the religious experience of believers. Modern facilities such as advanced sound systems, lighting equipment and worship utensils have been introduced to provide a comfortable and convenient belief environment for believers, and enhance the attractiveness of religious places and the participation of believers.

##### **Provide a full range of religious site management services:**

Solve the difficulties and challenges in the operation and management of Buddhist sites, and improve the management level and service quality. Set up a professional management team to carry out daily operations, security, maintenance and other work to ensure the normal operation of religious sites and meet the needs of believers and church organizations.

##### **Achieve business growth and profitability:**

Grow business volume and market share by providing high quality construction and operation services to increase revenue and profits. Expand revenue sources and business scope through religious tourism, religious cultural products and other related fields. Continuous innovation and market expansion to increase competitiveness and influence in the construction and management of religious sites in Kenya.

##### **Establish a good reputation and promote social harmony:**

To be a leader in the construction and management of religious sites and to build a good reputation for providing high quality services and experiences to Kenya's religious communities and followers.

By achieving these goals, we will meet the needs of religious communities in Kenya for places of worship and promote social harmony and development.

#### **4.4.3. Strategy**

The project strategy for the establishment of religious sites in Kenya is planned from the following aspects:

1. Market research and demand analysis, in-depth investigation into the needs of different religious groups in Kenya, especially the habits and cultural background of Buddhist believers, so as to select the appropriate construction site.
2. Work with the community, actively communicate with local community and religious leaders, ensure that the project is integrated into the local culture, organize cultural activities to raise awareness of Buddhism and enhance the sense of belonging of believers.
3. Sustainable construction, using environmentally friendly building materials, following green building principles and designing modern functional Spaces (such as meditation rooms and multi-purpose halls) to meet diverse needs.
4. Provide diversified services, such as meditation courses and cultural lectures, promote social inclusion, and carry out educational programs to spread Buddhist philosophy and culture.
5. Government support and regulatory compliance, communicate with the government to ensure that the project complies with laws and regulations, obtain policy support, and comply with the relevant laws and regulations on land use and building permits to reduce risks.
6. Promote religious tourism, develop religious tourism projects, combine local resources to attract tourists, promote Buddhist places through social media and travel agencies, and raise awareness.
7. Fund raising and financial management, ensuring diversified funding sources (such as community donations and support from international organizations), and developing financial management plans to ensure transparent and effective use of funds.
8. Monitoring and evaluation, regular evaluation of project progress and feedback, timely adjustment of strategies to improve service quality and ensure that the needs of believers and visitors are met. Through these strategies, we can effectively establish and operate religious sites in Kenya, promote the development of Buddhist culture, and promote social harmony and prosperity.

Through the above strategies, religious places can be effectively established and operated in Kenya, promoting the development of Buddhist culture, and promoting social harmony and prosperity.

#### **4.5. Segmentation, Targeting and Project Strategy**

In the temple market in Kenya, customers can be divided into the following segments based on different customer characteristics and needs.

Buddhist believers: Participate in religious activities, learn Buddhist culture, and seek spiritual support. Interested in meditation and mindfulness

Characteristics of non-believers: mainly composed of local residents and immigrants, have basic knowledge and belief in Buddhism.

Point of need: includes young people and professionals seeking mental health and spiritual improvement.

Needs: Offer meditation classes and mindfulness training to create peaceful Spaces  
Religious Tourist Characteristics: Domestic and foreign tourists, looking for cultural and spiritual experiences.

Needs: Visit religious sites, participate in special events and experience local culture.

Participants: Local residents and tourists interested in Buddhist culture and art.

Needs: Attend lectures, exhibitions and other cultural events to learn about Buddhist philosophy.

##### **Target market:**

Buddhists: To build a stable faith community and participation. Interested in meditation and mindfulness

Non-believers: Attract young professionals interested in spiritual practice to expand their audience base and market reach.

Religious tourists: Use Kenya's tourism resources to attract international tourists, increase visibility and sustainable income.

##### **Positioning strategies:**

Cultural and spiritual experience: Providing unique Buddhist cultural activities and spiritual services to become a center for promoting physical and mental health and cultural understanding.

Multifunctional space: Building a temple with modern facilities and multifunctional Spaces to meet the needs of different customers, from religious events to cultural lectures, meditation classes, etc.

Community inclusion and educational outreach: Actively work with local communities to raise awareness of Buddhism through cultural activities and enhance the sense of belonging and participation of believers.

Through clear market segmentation and positioning strategies with reference to key data related to the Kenyan market in Africa, we aim to build a Buddhist venue in Kenya that both meets the needs of the faithful and appeals to the wider community.

#### **4.6. Critical Success Factor**

In establishing a Buddhist site in Kenya, MJ Shanghai Consulting needed to rely on a number of key success factors to ensure the smooth implementation and sustainable development of the project. These factors can be divided into the following main areas:

1. The key to success is a thorough understanding of the local religious and cultural markets in Kenya. Accurate understanding of the needs of believers and potential customers through market research, consumer behavior analysis and communication with the community is the basis for designing and promoting services.
2. Excellent location and Cultural features Design Choosing a location suitable for the development of Buddhist sites is crucial to ensure convenient transportation and a good visitor experience. The design of the site should incorporate local cultural characteristics to attract more local people and tourists, and coexist harmoniously with local religious architecture and culture.
3. High-quality hardware facilities and comprehensive management services ensure that the infrastructure quality and service management level of the site directly affect the customer experience and the satisfaction of believers. The quality of the building, the maintenance of the facilities, the management of operations, and the quality of service to visitors and believers are all key to ensuring long-term success.
4. Cooperation with the Local government and community Building good relations with the local government and community is an important factor in the successful development of religious places. Government policy support, legal assistance and close cooperation with the community can help Buddhist sites better integrate into local society and promote religious and cultural exchanges.
5. Multi-party Cooperation and brand building Partnerships with international Buddhist organizations, local religious groups, the tourism industry and other cultural organizations can expand the influence of Buddhist sites. In addition, shaping Buddhist sites into spiritual and cultural centers with unique cultural experiences by creating a unique brand image is also key to the success of the project.
6. Diversified Sources of income The long-term operation of Buddhist sites depends on a stable source of income. In addition to traditional donations, income can be generated through diverse programs such as cultural events, meditation classes, health services and tourism

programs. This multi-channel revenue model will provide a solid financial foundation for the sustainable development of Buddhist sites.

7. Continuous innovation Continuous innovation is an important factor to ensure that Buddhist places can keep up with The Times, especially in terms of service innovation and technological innovation: Service innovation: constantly adjust and innovate service models according to market needs to improve the satisfaction and participation of believers. For example, by weakening the religious connotation and combining the interests of local people, diverse activities such as reading clubs, tea parties, concerts, flower arrangements, writing Chinese calligraphy, zen dance, vegetarian food, and zen walking are held to attract different groups of people to participate.

Technological innovation: Use modern scientific and technological means to improve the management and service level of religious places, such as providing convenient services through digital platforms and intelligent systems to optimize the experience of believers and the management efficiency of places.

With these key success factors, MJ Shanghai Consulting can ensure an edge in the construction and operation of Buddhist sites in Kenya and long-term success in the market. The organic combination of these factors not only helps to realize the economic benefits of religious places, but also helps to promote cross-cultural communication and community development.

#### **4.7. project objective**

Short term (3 year program), purpose: to build 3 temples, create awareness, integrate into the community. Location: Nairobi: The capital is home to a diverse population and an economic hub, providing convenience to the local community and international visitors, including Chinese expatriates and businessmen. Nairobi is conveniently located in the heart of the city, providing potential visibility for the temple. Mombasa: As a major port city with historical links to trade and migration, Mombasa's internationalization and tourism could support a Buddhist temple. The coastal city's religious diversity and tourist traffic make it another viable option. Kisumu is Kenya's third-largest city and a key regional hub. The city's cultural diversity and proximity to natural attractions offer opportunities for religious and cultural engagement, particularly with tourists seeking serene environments. While smaller than Nairobi and Mombasa, Kisumu's peaceful atmosphere and development trajectory make it a valuable location for community-building and cultural exchange.

Long-term (10-year plan), the goal is to expand the temple's role in the community, strengthen its cultural and religious presence, and establish long-term sustainability.

First, the long-term goal was to expand the temple's role in the community, strengthen its cultural and religious presence and establish long-term sustainability. Then it summarizes from five aspects: facility expansion, community project, tourism development, cultural exchange and financial sustainability.

For the expansion of facilities, the content of adding new structures and using the website for education was extracted; In the community project, initiatives to deepen community participation, such as health seminars, Chinese language classes and charity activities, were organized; In terms of tourism development, it highlights cooperation with travel agencies to promote temples as spiritual and cultural destinations; The cultural exchange section emphasizes the holding of activities to strengthen ties with Chinese enterprises and organizations in Kenya; Financial sustainability involves donations, partnerships and the provision of paid services.

Choose the right location: Nairobi, as it is the largest city in Kenya and has an established Chinese community. It is a center for international organizations and commerce, making it an ideal location for religious sites seeking local and international participation. Mombasa: If the temple's focus is on tourists and cultural exchange, Mombasa offers opportunities for international visitors and a rich and diverse population, although the infrastructure and audience may be smaller than Nairobi. Kisumu, which is Kenya's third-largest city and a key regional hub. It serves as a gateway to East Africa and has a growing infrastructure with tourism potential, making it a strategic location for a temple aimed at both locals and international visitors.

Conclusion: Building a temple in Kenya requires careful planning. In the first three years, the focus is on setting up the temple, building local community relations, and ensuring that the temple is located in an accessible area such as Nairobi or Mombasa. By year 10, the temple should expand its role in the community through additional services, tourism engagement, and long-term sustainability efforts.

## **4.8. Marketing-Mix**

### **4.8.1. Product**

In religious marketing, "product" refers not only to physical products, but also to the various services, experiences and cultural content provided by religious places. The core goal of religious marketing is to build a deep connection with believers and communities through these products and to convey the values of religious faith. The following is a specific description of the "product" category in the Buddhist marketing mix.

Religious Services refer to religious worship, prayer, ceremonies and other activities provided by a religious place on a regular basis or during a specific period. Liturgy: such as

Christian Sunday services, Islamic Friday services, etc. Religious ceremonies: such as weddings, baptisms, funerals, mitigates and other special religious ceremonies. Festivals: Celebrations of major religious festivals, such as Christmas, Ramadan, Vesak, etc. Religious education: Provides religious teaching, initiation, and preaching courses for believers and communities.

Religious Experiences allows believers to feel a deep connection to their religious beliefs through religious activities, rituals and cultural experiences. Pilgrimage experience: Organize believers to make pilgrimages to holy places, such as the Hajj to Mecca or visits to Buddhist holy places. Immersive activities: Through retreats, meditations, prayer meetings and other activities, believers can experience inner peace and the power of faith. Spiritual and Meditation: Through specialized spiritual activities, help believers to spiritually connect with gods or cosmic forces. Deep participation in religious ceremonies: such as collective prayer during festivals, retreats, religious festival processions, etc.

Religious Culture refers to the cultural traditions, historical backgrounds, artistic expressions and other cultural contents related to religion, which can enhance religious identity and belonging. Buddhist art and Architecture: Religious art forms including architectural styles, sculptures, paintings, totems and other religious art forms inside and outside religious places. Buddhist music and dance, Buddhist literature and classics study, explain and promote Buddhist suntraps, etc. Cultural festivals and celebrations Spread Buddhist culture through specific festivals, such as the birth of Buddha and various Bodhisattva birthdays.

Religious Goods are physical goods associated with religious beliefs, usually of symbolic significance, that believers can use or possess to strengthen their connection to the faith. Buddhist symbols such as Buddha, prayer beads, amulets, etc. Liturgical articles: such as communion cups, sacrificial utensils, incense sticks, prayer rugs and other items used for religious ceremonies, commemorative badges, bookmarks, statues, picture albums and so on in Buddhist places. Books and literature: including religious books, prayer manuals, spiritual guides and other religion-related publications.

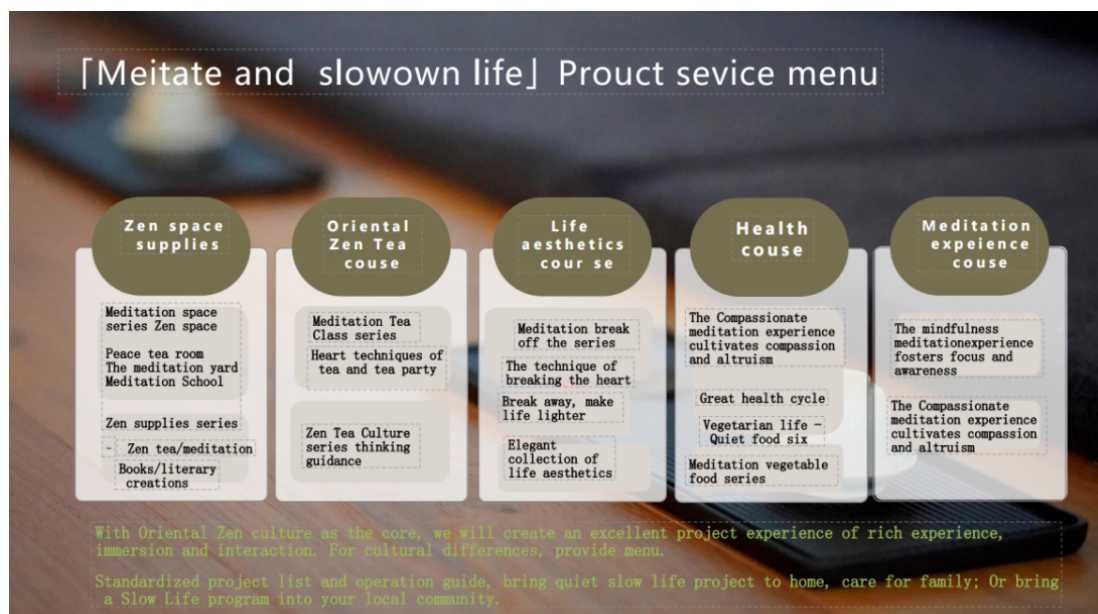

Buddhist places provide Education and Training to help believers gain a deeper understanding of the faith and participate in Buddhist activities. All courses and activities will be offered in both Chinese and English, ensuring easy access for both local and international participants.

Social Services and Charitable Activities Social services and charitable activities provided by Buddhist sites, through which Buddhist organizations not only fulfill their faith obligations, but also strengthen their ties with the community. All services will be supported in both Chinese and English, making it easy for participants from different language backgrounds to participate. Medical and Health services provide free or low-cost medical services, health screenings, vaccinations, etc. Relief and poverty alleviation: help the poor, disaster relief, food distribution

and other charitable activities. Educational support: Establish schools or provide scholarships to help poor families in the community receive an education. Psychological counseling and counseling: Provide psychological counseling, marriage counseling and other services for believers or community members in need.

Religious Tourism combines religious sites and related activities with tourism to attract believers and tourists to visit and participate in Buddhist activities. All tourism and cultural experiences will be provided in both Chinese and English to ensure a smooth experience for visitors to China. Buddhist Pilgrimage: Organizing or receiving religious pilgrimages to holy places. Buddhist Cultural Experience Tours provide cultural tourism products related to Buddhism, allowing visitors to experience the local religious culture and customs. The development of Buddhist scenic spots develops religious sites and their surroundings into religious scenic spots to attract tourists to visit and learn. Provide product service menu for Buddhist places: Zen space, Oriental Zen tea, life aesthetics course, health and wellness course, meditation experience course, etc. Professional English translators and local service volunteers are available. The core culture of the establishment of Chinese temples includes the activities of other religions, which is a kind of cultural exchange and a way of life. People learn to relax, have the ability to meditate and have the ability to rest. A very popular project with the public. It is also the most competitive core force, because this is the need of every person, which has gone beyond the religious life, and is more of a spiritual one.

Figure 4. 5-The Provide the product service menu

Source: The Mindful peace international company (2024)

A range of services at Buddhist sites in Kenya can meet the needs of Chinese enterprises, business associations, the tourism industry and local social organizations in Kenya. These include customized mindfulness and stress management workshops for Chinese companies and business associations, executive meditation retreats, and team building activities that incorporate mindfulness and meditation to help employees manage stress and develop leadership.

In addition, the Buddhist venue will also offer cultural and business networking events, such as a Kenyan cultural exchange meeting to promote cross-cultural understanding, and a B2B networking event with Buddhist themes to help Chinese and Kenyan businesses build common interests based on spirituality, health and cultural values.

Tourism and leisure programs include Buddhist spiritual Tours, Zen and nature retreats, culinary experiences and more, providing visitors with an in-depth cultural and peaceful experience. The Health and Wellness program combines Buddhist philosophy with the practice of traditional Chinese medicine, offering retreats such as health counseling, traditional Chinese health care, meditation vegetarian courses, the aesthetics of life, and personalized mindfulness meditation.

In addition, community engagement and social services will be a core component, including partnerships with local ngos, charitable outreach programs, Buddhist philosophy research groups, and education programs for youth. Through these diverse services, Buddhist sites will not only be able to promote spiritual growth and cross-cultural cooperation, but will also become multi-functional Spaces for relevant stakeholders, meeting the needs of both parties.

All services will be supported in both Chinese and English, ensuring that Chinese companies, the tourism industry, local social organizations and global tourists can easily participate in and understand the services.

In short, in Buddhist marketing, "product" covers a wide range from traditional goods to services, experiences, and cultures. By carefully designing and promoting these products, places of worship can not only attract and retain believers, but also enhance their influence in the community through education, cultural outreach and charitable services. This diversified product portfolio not only meets the needs of different believers, but also provides diverse sources of support for the long-term development of religious sites.

#### 4.8.2. Price

When providing products and services to temples in Kenya, pricing strategies need to be flexible and adjusted according to the affordability and market demand of the target market. Here are pricing suggestions for the main products and services:

1. Religious core services: Buddhist chapel, meditation room Use: free or based on voluntary donation model. In order to attract more local people to participate, people are encouraged to make small donations (such as 50-100 Kenyan shillings, about 0.5-1 US dollars) according to their personal financial circumstances. Buddhist Festival Participation: Free and open to the public, but donation boxes can be placed during the festival to encourage voluntary donations to support the temple's operations (suggested donations range from 50-200 Kenyan shillings, about \$0.5-2).

2. Cultural and Educational services:

Buddhist Philosophy lectures: Fees range from 200 to 500 Kenyan shillings (about US \$2 to US \$5) per lecture, with flexible pricing depending on the length and complexity of the lecture.

Buddhist Classics Study sessions: Each session costs KSH 500-1,000 (~ US \$5-10), with further discounts for participants in long-term study sessions to increase participation.

Cultural exhibitions: Admission costs 100-300 Kenyan shillings (about 1-3 US dollars), making sure the price is affordable to attract more visitors.

Figure 4. 7-The Buddhist lectures and tea parties

Source: The Mindful peace international company (2024)

### 3. Spiritual and Health Services:

Meditation and Mindfulness courses: 500-1,000 Kenyan shillings (~ US \$5-10) per course, group courses are less expensive, and private courses are moderately priced but within local affordability (1,000-1,500 Kenyan Shillings, ~ US \$10-15).

Spiritual Retreat Programs: Short-term programs (e.g., 2-3 days) cost 3,000-5,000 KSHillings (approximately US \$30-50), depending on the program content and facility usage, and try to provide affordable options.

Figure 4. 8-The meditation

Source: The Mindful peace international company (2024)

#### 4. Religious Tourism Services:

Religious guided Tours: Each guided tour costs 200-500 Kenyan shillings (about US \$2- US \$5), international visitors can increase the price appropriately but still keep it within a reasonable range (e.g. 500-800 Kenyan Shillings, about US \$5- US \$8).

Religious Travel packages: Depending on the package content (including accommodation, meals, guided Tours, etc.), each package costs 5,000-15,000 KSHS (~ US \$50-150), offering a variety of options to suit different budget needs.

Figure 4. 9-The Religious guide service area

Source: The Mindful peace international company (2024)

#### 5. Additional facilities and Services:

Library and Reading Room use: Admission is free, but membership can be set up at a low cost of KSH 200-500 (about US \$2-5) per year.

Multi-function Event Room rental: 1,000-2,500 KSHillings (~ US \$10-25) per hour for community events, lectures or celebrations, ensuring that the price is reasonable and accessible.

Figure 4. 10-The Multi-function hall

Source: The Mindful peace international company (2024)

These price recommendations are based on the local economic level and spending power in Kenya, taking into account the different needs of different customer groups

#### **4.8.3. Place**

When promoting Buddhist temples and their related services in Kenya, the following four main distribution channels and locations can effectively support the objectives of religious organizations:

##### **Physical Locations**

Features: Traditional channels, mainly including temples, religious schools and charity facilities.

Advantages: Provides a face-to-face religious experience and community interaction with strong symbolism.

##### **Digital and Online Channels**

Features: Provides online religious services through websites, social media and live streaming platforms.

Advantages: Wide coverage, flexibility and convenience, suitable for believers who are far from physical places to participate.

##### **Mobile and Temporary Locations**

Features: Dissemination of religious teachings through books, audio, video and radio.

Benefits: Extensive coverage, providing ongoing religious education and spiritual support.

##### **Community Events and Engagement**

Features: Holding religious festivals, charity activities and educational courses to enhance the interaction of believers.

Advantages: Direct contact with believers, enhance community ties, enhance social image.

Conclusion Choosing the right distribution channel is the key to ensure the effective delivery of religious products and services. Religious organizations should take into account the needs of the target audience and the socio-cultural environment to promote the spread and development of Buddhism in Kenya.

#### **4.8.4. Promotion**

Religious promotion refers to the behavior of religious organizations, religious groups or individuals to disseminate religious beliefs, teachings and practices through various means in order to expand their influence and the community of believers. Religious promotion is not limited to traditional missionary activities, but also includes many modern ways.

The specific action plan for promoting temple promotions in Kenya aims to increase brand awareness, attract believers and tourists, and promote the spread of Buddhist culture. Overview of the action plan for the temple promotion business in Kenya

1. Goal setting: The goal of the operation is to attract at least 500 new believers and 1,000 visitors. Market objective: To raise awareness of the temple in the local community and in the tourist market.

2. Brand building: Time frame 1-2 months. Action steps, design the temple logo and promotional materials. Develop a brand story, highlight the temple's mission and cultural values, and create and optimize the temple's official website.

3. Online promotion: Time frame 2-6 months. Action steps, regular content in publications and on social media. Run an online advertising campaign to attract potential participants. Use blogs and video platforms to share Buddhist culture and activities.

4. Offline promotion activities: Time frame 3-12 months. Action steps: Hold an "Open Day" event to invite the public to visit the temple. Organize community cultural festivals and lectures to attract participation. Participate in local markets and festivals and set up booths.

5. Cooperation and Partnership: Time frame 4-12 months. Take action steps to build partnerships with community organizations, travel companies, and religious groups. Carry out joint activities such as Buddhist culture lectures and charity events. Network with international Buddhist organizations for support. 6. Community engagement and education: Time frame 5-12 months. Action steps: Open free educational courses to introduce Buddhist philosophy. Organize volunteer activities to encourage public participation in temple management. Promote social responsibility projects and strengthen community ties.

7. Monitoring and evaluation: The time frame is ongoing. Action steps, collect feedback from participants and evaluate the effect of activities. Analyze the effectiveness of promotional activities, record and summarize the data. Adjust promotional strategies based on feedback and market changes.

Through this action plan, the aim is to increase the visibility and influence of the temple, promote the spread of Buddhist culture in Kenya, and promote the harmony and prosperity of the community.

## 4.9. Economic and Financial Viability Analysis

### 4.9.1. Assumptions

The following assumptions were made on the economic and financial viability analyses:

- Average payment time = 0 days (prompt payment)
- Average collection time = 0 days (prompt payment)
- Discount rate = 10%
- Annual increasing rate of revenues = 5%
- Annual increasing rate of salaries & other operational costs = 5%
- Profit margins on Buddhist goods = 25%
- The analysis is done on constant prices
- As a religious institution, it does not pay corporate taxes
- This project is funded by the equity of its shareholders
- Currency: dollar

### 4.9.2 Investment

This project includes the construction of 5 temples, 2 in Nairobi, 2 in Mombasa, and 1 in Kisumu. The following maps describe the investment.

Table 4.6 - The Investment schedule

|                             | Nairobi<br>(Temple 1) | Nairobi<br>(Temple 2) | Mombasa<br>(Temple 1) | Mombasa<br>(Temple 2) | Kisumu |

#### 4.9.4 Costs

The following table presents the expected operational costs (except the depreciations) from this project, by temple.

Table 4.12 -The Costs map

#### 4.9.5 Analysis of the economic viability of the project

The following table presents the expected net present value generated by this project, as well as its internal rate of return and the payback period. So, it can be concluded that this project is economically viable, generating a net present value of about \$2.6 million, and an Internal rate of return of 25%. This project starts generating a positive cumulative cash flow in 6 years after the initial investment.

Table 4.14 -The Economic viability indicators

|                                                              |           |

## 5. Conclusions

MJ Shanghai Consulting plans to set up religious sites in Kenya, aiming to drive the growth and profitability of the company's business by meeting the religious needs of the country.

The project not only focuses on the construction and operation of religious sites, but also on upgrading the quality of religious services and exploring business opportunities to achieve profitability.

**Market Background and Opportunities** Religious needs: Kenya has a diverse range of religious beliefs, with Christianity and Islam predominant. The number of existing religious places is insufficient, and there is a significant gap between supply and demand, which provides a broad market opportunity for new religious places.

**Economic environment:** Kenya's steady economic growth, the expansion of the middle class and the improvement of consumption power have created favorable conditions for the construction and operation of religious sites. Government policy support and economic reforms have further lowered the barriers to market access.

**Socio-cultural:** Kenyan society's emphasis on religious activities and the increasing demand for high-quality religious services provide a wealth of business opportunities for the project.

**Local design:** Design places that incorporate local religious cultures and customs to ensure they meet local beliefs and cultural needs.

**High quality facilities:** Modern hardware facilities such as sound systems, lighting, etc. are provided to enhance the religious experience of believers.

**Professional management:** Establish a professional management team to ensure the efficient operation and service quality of the site.

**Marketing:** Increase brand influence and market share through effective marketing strategies and community cooperation.

**Risk Management** Economic risks: including exchange rate fluctuations and economic downturns, strategies need to be developed to reduce the risk of economic fluctuations.

Cultural and regulatory risks: The need to overcome cultural differences and ensure that the project complies with local laws and regulations.

**Competition risk:** Competition from existing religious sites and service providers needs to be assessed and addressed.

**Cost control and profit forecast:**

According to the initial cost analysis of the project, the initial investment includes land acquisition, building construction, equipment procurement, etc., with a total investment of \$5,000,000. These costs were concentrated in the first 5 years and involved the construction

and operational infrastructure of five temples. Land acquisition and construction accounted for the largest proportion of investment, while hydropower facilities and furniture equipment were gradually invested according to the progress of the project. Annual operating costs are increasing each year as revenue grows. Operating costs include staff salaries, routine maintenance and minor modifications. In terms of revenue, the main sources of the project include religious activities, meditation classes and sales of Buddhist merchandise. The total revenue in the first year is expected to be \$570,000, and with the gradual construction and operation of the temple increasing, the total revenue by the 10th year is expected to be \$1,995,000.

According to the financial forecast, the annual profit is about \$420,000 in year 1 and increases year by year, and is expected to reach \$1,395,000 by year 10. Through the growth of multiple revenue sources, the project enters a stable profitable period after the seventh year, with an internal rate of return (IRR) expected to be 10%, indicating a high financial rate of return for the project. The net present value (NPV) of the project is \$78,554 and the payback period is 7 years, indicating that the project can recover the initial investment in a relatively short period of time and continue to generate profits.

Conclusion: The project of establishing Buddhist sites has good market prospects and commercial potential in Kenya. Through a combination of local religious culture, local design, quality facilities and professional management services, MJ Shanghai Consulting is able to meet the Buddhist needs of Kenya and achieve commercial profitability. At the same time, companies need to actively respond to economic, cultural, regulatory and competitive risks and develop effective risk management strategies.

Overall, MJ Shanghai Consulting Company's project will not only promote the development of religious undertakings in Kenya and improve the level of local religious services, but also enhance the company's competitiveness and influence in the international market, and achieve the dual goals of commercial and social value. Through continuous market research and strategic adjustments, the company is expected to achieve long-term sustainable development in the Kenyan market.

## Appendices

### Appendix A – In-Depth Interview

An in-depth visit to Buddhist temples in Kenya

**1. Interview time: 2024.04.26**

**2. Location: United Nations Area, Nairobi, Kenya**

**3. Purpose of the interview: To understand respondents' attitudes towards the establishment of Buddhist sites in Kenya, challenges and opportunities for religious integration**

**4. Interview method: face-to-face**

**5. Interview subjects: The anonymity of the interview is used to build trust, so as to ensure the candid answers of the interviewees.**

**May:** Community leaders, local government officials President

**Wang:** Representatives of religious organizations in Kenya (including representatives of other religions)

**Mr. Zhang:** President of Kenya Chinese Chamber of Commerce

Introduction to Project background: As China's Belt and Road Initiative (BRI) strengthens bilateral ties, the increasing number of Chinese living and working in Kenya provides strategic opportunities for the construction of temples to serve local and expatriate communities. The project to build a Buddhist temple in Kenya sits at the intersection of cultural exchange, religious diversity and economic development.

**Warm-up question:** What do you know about Buddhism or other Asian religions? What aspects of Buddhist culture have you encountered in your life? (if any)

**May Community LEADER:** "I have heard that I have not encountered many direct Buddhist practices in my daily life. The main religions in Kenya are Christianity and Islam, but there are also some traditional faiths. However, I know some locals who have developed an interest in Eastern practices such as yoga or meditation, which are often linked to Buddhist teachings.

**Mr. Wang** (Representative of the religious community in Kenya) : "As a representative of the religious community, I have met some people in Kenya who are interested in meditation, especially as a way to manage stress and improve mental health. While they may not directly link meditation to Buddhism, it is clear that Eastern meditation is gaining popularity in our urban centers as China-Africa cooperation deepens.

**Mr. Zhang** (President, Kenya Chinese Chamber of Commerce) : In terms of Chinese interaction with the local community in Kenya, I have noticed that they are somewhat curious, especially about Buddhist influenced customs such as tea ceremony and meditation. Chinese companies often incorporate elements of these cultural traditions into their interactions, and I

believe there is room for deeper cultural exchanges. Building temples can act as a bridge, giving Kenyans the opportunity to approach Buddhism with a more open mind.

**Interviewer:** Have you ever met a May community leader: Maybe, "I only learned about Buddhist practices through news or documentaries. Occasionally, I see images of Buddhist temples or monks in the media. However, in my community, we haven't had much exposure to Buddhism. Our religious sector is mostly Christian, and the number of Muslims is increasing. That being said, people here are willing to explore new ideas, especially those that promote harmony and mental health."

**Mr. Wang** (Representative of the Kenyan religious community) : "As mentioned earlier, we have very little direct contact with Buddhism, but I have found that certain aspects of Buddhist culture have infiltrated the urban space, especially the Chinese population in Nairobi. Sometimes, during cultural festivals, you will see elements of the Chinese Buddhist tradition, although they are subtle. However, most Kenyans would not immediately realize that these customs are associated with Chinese Buddhism.

**Mr. Zhang** (President of the Chinese Chamber of Commerce) : "For Chinese people living here, Buddhism is often present in small rituals - burning incense or praying during festivals like the Lunar New Year. While these may not be formal temple practices, they represent the influence of Buddhist culture. We are also seeing meditation and wellness practices on the rise in Kenya, although not always in terms of direct contact, where some expatriates and Chinese businesses quietly observe Buddhist customs, but there are no formal practice sites at the moment. Establishing a temple will provide a way for the Chinese community and curious Kenyans to engage with these traditions more openly." The dialogue showcases how representatives from different fields view Buddhism and its cultural practices in Kenya, reflecting a curiosity and openness to the possibility of Buddhism and its cultural practices being established in Kenya.

Core Interview Questions (60 min.)

**1) Cultural Customs and Norms Interviewer:** Christianity and Islam are the main religious traditions in Kenya, and their influence is widespread. The openness of local people to new religious practices is to be assessed. Is it possible to integrate Buddhist practices with local traditions? Buddhist practices such as meditation, mindfulness, retreat, etc. may be combined with local customs and may face cultural conflicts, which can be resolved through positioning adjustment, religious dialogue and cooperation, and organizing cultural activities.

**May:** I think for Kenyans to take root in Buddhist practices like meditation or mindfulness, they need strong concentration - less focus on religious conversion and more focus on the health and wellness aspects. Kenyans appreciate spiritual practices that promote personal

growth, harmony and community cohesion. So if Buddhism is constructed in this way, it has the potential to compete with, however, the challenge lies in people's strong identification with Christianity and Islam. Any new religious practice could be seen as a threat to those beliefs. This is the importance of interreligious dialogue, showing that Buddhist practices do not undermine existing traditions, but can coexist peacefully.

**Mr. Wang** (representative of the religious community in Kenya) echoed May's view.

**Mr. Zhang** (President, Kenya Chinese Chamber of Commerce) Just as from a cultural perspective, in order to avoid cultural conflict, we should emphasize the universal values of peace, mindfulness and community that Buddhist practice can promote. The key is to create Spaces for dialogue and cooperation, perhaps through joint events with Christian and Muslim organizations, or through cultural festivals that emphasize shared values.

Interviewer: Is there a common interest in organizing cultural festivals?

**Mr. Wang** (Representative of the religious community in Kenya) : "I agree that cultural festivals communicate with each other." Mr. Zhang (President of Kenya Chinese Chamber of Commerce) : Of course. May (Kenyan Community Leader) : Cooperation between religious communities is key. By involving community leaders, we can ensure that Buddhist practices are introduced in line with local customs and values. Engaging church leaders in discussions about meditation and mindfulness, for example, helps dispel concerns that these are competing religious practices. We could also explore joint community service projects where Buddhists and local religious groups work together on charitable activities. This will emphasize shared values, such as compassion and philanthropic activities

**Mr. Wang** (Representative of the religious community in Kenya) "Interreligious cooperation is a practical way forward. Organizing shared events, such as open discussions about mental health or interfaith dialogue about spirituality, can create a platform for mutual understanding. Such activities can show that Buddhism is not in conflict with Christianity or Islam, but can offer complementary practices such as mindfulness that are in line with universal values of peace and self-reflection. In addition, creating Spaces where religious leaders from different backgrounds can meet and share experiences will promote mutual respect."

**Mr. Zhang** (President of Kenya Chinese Chamber of Commerce) From the perspective of enterprises and companies, the physical and mental health of employees is the key. In a foreign country, it is very necessary to comfort the soul, relieve the anxiety caused by work pressure, cultivate compassion and improve good interpersonal relations, reflect on themselves in the face of setbacks, reinvigorate strong willpower to overcome difficulties, and grow the soul. Find inner peace and self-knowledge. This is a very needed kernel construction within the enterprise.

**Interviewer:** Thank you for these valuable suggestions. The three provided a nuanced discussion from different perspectives on how to integrate Buddhist practice in Kenya while

addressing cultural sensitivities and promoting collaboration with local religious and community leaders.

## **2) Interests and Activities:**

**Interviewer:** Kenyan society's interest in religious activities, meditation, health practices, etc. Please talk about the status of cultural activities in the community.

**May Community Leader:** "Meditation and wellness practices are gaining acceptance in the Kenyan community, especially among some young people and urban populations who are beginning to seek new ways to cope with life stresses and mental health issues." Traditional religious practices continue to dominate, especially Christian and Islamic prayers and community gatherings. However, practices such as meditation and mindfulness in Buddhism may be welcomed if they focus on mental health and personal growth. Cultural activities are essential to the astrolabe of a community. Whether it's holiday religion, concerts, or community celebrations, they all play an important role in maintaining social ties. "If we can combine local culture and hold Buddhist cultural events with Kenyan characteristics, there will be greater potential."

"As far as religious activities are concerned, Kenyans have a more respectful attitude towards different religions, especially in urbanized areas. Although thinking is not mainstream in traditional Christian culture, there are similarities with the concepts of prayer and contemplation, so attention to modern thinking is likely to increase. However, the introduction of health practices must be handled strictly, especially when it comes to the combination of religion and physical health. In the stores, we are already running health promotion activities such as mental health talks and health management courses. Buddhist sites that focus on health practices may be of interest to some, but they need to avoid antagonizing Christian traditions."

**Mr. Zhang** (President, Kenya Chinese Chamber of Commerce): "In my opinion, there has been a significant increase in the awareness of health practices in Kenyan society, especially among the urban middle and upper classes, who are very interested in wellness and meditation. Buddhist meditation and health courses, if combined with modern health management concepts, may appeal to many middle and upper income groups and Kenyans who are interested in Chinese culture. Cultural activities also play an important role in the community, especially in combination with Chinese cultural resources and Buddhist background, such as tea ceremony and text display, which can bring more cultural experiences to the community. Through these activities, we can not only enhance the cultural influence of the temple, but also attract support from the business community and food." "

**3) Social participation and Community interviewees:** The role of religious institutions in social services in Kenya, and the service model of existing religious organizations. Community service roles that Buddhist temples can take on. Prospects for inter-religious cooperation The present situation and development trend of religious harmony. The possibility of cooperation between Buddhist temples and local churches and mosques.

**May Community leaders:** Religious institutions have long played an important role in providing social services in Kenya, especially in education and health care. Churches and mosques regularly organize community welfare programs, such as free medical services, food distribution, and educational support. These projects increase the influence of faith-based organizations in the community. Buddhist temples can gather similar service models to provide services needed by the community, especially in the areas of mental health, meditation therapy, and education. For example, establishing psychological counseling centers or health clinics to help deal with mental stress and health problems of community members will face meaningful contributions. The prospects for interfaith cooperation are very bright. Churches and mosques have years of experience of working together, especially when it comes to common social problems, such as poverty and crime. Temples can build cooperation with other religious organizations to promote religious harmony by organizing interfaith cultural events and charitable projects.

**President Wang** (Representative of Religious Organizations in Kenya) plays a vital role in charity and social services for communities in Kenya. Christian organizations have extensive experience in education, health and other areas, especially through church organizations that focus on the daily needs of community members, especially during religious holidays such as alms during Ramadan. Community role of Buddhist temples: Buddhist temples can complete the gaps in the existing religious service system through meditation, mental health support, loving meals, disaster assistance and other services. For example, temples can provide mental health counseling, especially with the increased stress of modern life, which is very helpful to human health with Buddhism. Interfaith cooperation has a long history of interfaith cooperation in Kenya, and platforms for religious dialogue are constantly evolving. Buddhist monasteries can participate in these platforms of dialogue by organizing joint charity events, peace forums, and cultural exchanges to establish cooperation with Christian and Islamic organizations to jointly serve the community and promote interfaith understanding and harmony.

**Mr. Zhang** (President of Kenya Chinese Chamber of Commerce): I agree with you two. There are more and more Chinese enterprises in Kenya, and it is more necessary to integrate into Kenyan society. Cultural activities suitable for Buddhist temples include: meditation and meditation activities, including meditation camps and meditation courses for different groups; Cultural lectures and seminars, inviting scholars and eminent monks to explain Buddhist culture and hold related seminars; Art exhibitions and performances, such as Buddhist art

exhibitions, music recitals, dance performances; Traditional festival celebrations, rituals such as Dharma meetings and charity activities; Cultural experience activities, including tea ceremony experience, sutra copying, handicraft production; Family activities, such as family meditation and story sharing sessions; Academic exchange activities, organizing exchange meetings between Buddhism and other disciplines and inviting scholars to give lectures

**Interviewer:** Thank you for these valuable suggestions. The three provided a detailed discussion from different perspectives, exploring how Buddhism can be integrated into Kenyan society and communities, and addressing the compatibility between Buddhism and local religious institutions to serve the local people.

#### Summary and outlook:

Summary of Key findings: On the market demand side, the local younger generation and urbanized groups are interested in healthy lifestyles such as meditation, and Buddhist places can provide spiritual solace and attract people seeking inner peace. In terms of cultural adaptability, although Buddhism is emerging in Kenya, it can be integrated into the local community through dialogue and cooperation with major religions, and the emphasis on universal values can be more widely accepted. In terms of legal and financial viability, financial sustainability can be ensured through cooperation with the government and multi-channel financial support. In terms of long-term development potential, the expansion of temple facilities can enhance the attraction and generate economic benefits, and the educational website and cooperation with travel agencies can expand the influence.

#### li. Future Development Suggestions:

Strengthen multi-party cooperation and community integration, communicate with local religious groups, leaders and governments, and organize interfaith events and charitable projects to gain trust and support. Expand funding sources by partnering with Chinese businesses, Chinese communities and international Buddhist organizations to provide long-term funding and develop fee-based programs to generate sustainable income. Strengthen cultural promotion and education, promote Buddhist philosophy, healthy lifestyle and cross-cultural communication through online and offline education, and develop educational programs for young people and enterprise employees. Expand facilities and develop religious tourism, build hotels to meet demand, and cooperate with travel agencies to develop tour packages to attract tourists.

## Appendix B – Survey Questionnaire

1. Your gender

- ☐ Man
- ☐ Female
- ☐ Other

2. Your age group

- ☐ 18-25
- ☐ 26-35
- ☐ 36-45
- ☐ 46-60
- ☐ Over 60 years old

3. Your occupation

- ☐ Office worker
- ☐ Student
- ☐ Freelancer
- ☐ Governmental personnel
- ☐ Entrepreneur
- ☐ Others (please specify):

4. Your religion

- ☐ Mohammedanism
- ☐ Christian
- ☐ Buddhism
- ☐ Traditional religion

- ☐ No religion
- ☐ (Please specify):

5. Your location

- ☐ Nairobi
- ☐ Mombasa
- ☐ Kisumu
- ☐ Others (Please specify):

6. Your knowledge of Buddhism:

- ☐ Know a lot about
- ☐ General understanding
- ☐ Have some understanding of
- ☐ Know nothing

Would you be interested in the following services offered by Buddhist sites?

- ☐ Spiritual practice/meditation
- ☐ Buddhist culture lecture
- ☐ Community service (e.g. charity)
- ☐ Cultural exchange activity
- ☐ Others (please specify):

7. If you had the chance, would you like to visit or participate in activities at Buddhist sites?

- ☐ Willing to do that
- ☐ Be willing to
- ☐ Completely unwilling

☐ Indeterminacy

8. Do you think the local government and community will support the establishment of Buddhist sites in Kenya?

☐ Yes

☐ NO

☐ Indeterminacy

9. What attitude do you think the government should take towards the spread of foreign Religions such as Buddhism in Kenya?

☐ Positive support

☐ Remain neutral

☐ Close restraint

☐ Indeterminacy

10. What do you find to be the biggest challenge in setting up a Buddhist site in Kenya?

☐ Low cultural acceptance

☐ The pressure of religious competition is high

☐ The complexity of laws and regulations

☐ Other (please specify): \_\_\_\_\_

11. In your opinion, how can a Buddhist site integrate with Kenyan culture? (Select all that apply)

- ☐ Incorporating traditional Kenyan music or dance into Buddhist ceremonies
- ☐ Participating in Kenyan festivals or cultural events
- ☐ Offering a mix of Buddhist and local cultural products
- ☐ Organizing intercultural exchange events
- ☐ Not sure
- ☐ Other (please specify): \_\_\_\_\_

12. What type of meditation or wellness programs would you be most interested in?  
(Select all that apply)

- ☐ Short meditation workshops (1-2 days)
- ☐ Long-term retreats (3-7 days)
- ☐ Mindfulness and stress management courses
- ☐ Health and wellness courses combining traditional medicine (new)
- ☐ Family or parent-child meditation activities
- ☐ Other (please specify): \_\_\_\_\_

13. What would you consider a reasonable fee for meditation or cultural programs?

- ☐ \$2-\$5 per session
- ☐ \$5-\$10 per session
- ☐ \$10-\$20 per session
- ☐ \$20-\$30 per session
- ☐ Over \$30 per session
- ☐ Price does not matter, I am happy to support religious activities

14. What would motivate you to attend events at a Buddhist site? (Select all that apply)

---

- ☐ Seeking inner peace
- ☐ Interest in Buddhist culture
- ☐ Health and wellness benefits (new)
- ☐ Meeting new people
- ☐ Participating in charity events
- ☐ Other (please specify): \_\_\_\_\_

15. Would you be willing to donate to support the operation and development of the Buddhist site?

- ☐ Definitely
- ☐ Maybe, depending on circumstances
- ☐ Not sure
- ☐ No, I would not donate

16. If willing to donate, how much would you consider donating annually?

- ☐ \$10-\$50
- ☐ \$50-\$100
- ☐ \$100-\$500
- ☐ Over \$500
- ☐ Not sure

## Appendix C - Survey results
